REPORT  
OF THE  
DEPUTY MINISTER OF RAILWAYS AND CANALS  
FOR THE YEAR ENDING MARCH 31, 1923

To the HON. GEO. P. GRAHAM,  
Minister of Railways and Canals.

SIR.—I have the honour to submit herewith the annual report of the Department of Railways and Canals. For the railways, it covers the calendar year 1922; for the canals, highways, etc., the fiscal year ended March 31, last.

The operated mileage of the Canadian National System, all lines, on December 31, 1922, was:—

Canadian Government Railways—		
Intercolonial Railway (including Branch Lines).....	2,283·44	
National Transcontinental Railway Eastern Lines.....	1,415·74	
National Transcontinental Railway Western Lines (including Lake Superior Branch).....	582·14	
St. John & Quebec Railway.....	171·80	
Hudson Bay Railway.....	214·00	
		4,667·12
Canadian Northern Railway System—		
Canadian Northern Railway Eastern Lines (including Halifax & South Western Ry.).....	2,892·28	
Canadian Northern Railway Western Lines, including (Duluth, Winnipeg & Pacific Ry).....	6,976·38	
Niagara, St. Catharines & Toronto Ry. & Toronto Suburban Ry. (Electric Lines).....	126·13	
		9,994·79
Grand Trunk Pacific Railway.....	2,710 50	
		2,710·50
Grand Trunk Railway System—		
Grand Trunk Railway Canadian Lines.....	3,611 87	
Grand Trunk Railway Western Lines.....	991·69	
Grand Trunk Railway New England Lines.....	172 21	
	4,775 77	
Central Vermont Railway.....	532 50	
		5,308 27
		22,680 68

AVERAGE MILEAGE OPERATED

Canadian National Railways.....	17,351 43	
Grand Trunk Railway System (Including Central Vermont Ry).....	5,314 08	
		22,665 51

The gross operating revenue of the combined and consolidated system was \$234,111,090.01, two millions less than the previous year, and the operating expenses, \$229,917,540.98, as compared with \$247,947,842.48 in 1921. The net revenue from railway operation was \$4,193,549.03, and the total revenue before fixed charges was \$2,202,782.82, compared with a deficit of \$12,638,778.88 in 1921.

The fixed charges, all lines, were \$62,454,627.95, of which \$24,649,513.45 was due the Government and \$37,805,114.50 due the public. The grand total deficit was \$60,251,845.13, an improvement of \$12,410,433.03 for the year.

The Canadian National System (exclusive of the Grand Trunk, which was merged with the National System only on Oct. 4, 1922) consisted of the original Canadian Government Railways, the Canadian Northern Railway and the Grand Trunk Pacific and branch lines. During 1922 the gross operating revenue of these roads was \$120,135,956.71, as against \$127,002,466.64 in 1921; the operating expenses \$129,872,274.75, as against \$143,222,802.55; leaving a net deficit from railway operation of \$9,736,318.04, as compared with \$16,220,335.91 for the previous year.

Tax accruals brought the total operating deficit for 1922 up to \$11,085,081.33, as against \$17,805,365.16 for 1921. Non-operating income—car rentals, rental of joint facilities, express, mails, elevators, etc.—amounting to \$5,644,217.22, was offset by the usual deductions from gross income—hire of equipment, joint facilities, etc.—amounting to \$4,421,180.49, leaving the total deficit before charges \$9,862,044.60, as compared with \$16,212,063.22 in 1921.

The fixed charges amounted, in 1922, to \$41,241,252.31, of which \$32,711,546.22 pertain to the Canadian Northern, and \$8,529,706.09 to the Grand Trunk Pacific. These fixed charges swell the total Canadian National deficit to \$51,103,296.91 as compared with \$56,989,978.82 in 1921.

## ANALYSIS OF NET OPERATING DEFICIT

The net operating deficit of the Canadian National System (exclusive of Grand Trunk) was \$9,736,318.04, compared with \$16,220,335.91 in 1921. The net operating deficit of the Canadian Government Railways was \$2,496,721.91, as against \$5,714,732.90 in 1921. Of this, the Intercolonial and branch lines were responsible for \$2,302,703.36, compared with \$4,457,035.75 in 1921; the Prince Edward Island District, \$634,588.66, as against \$617,158.93 the previous year; the Transcontinental—lines east of Armstrong—\$875,233.02, as against \$1,964,730.89 in 1921; Transcontinental lines—west of Armstrong and east of Winnipeg, including the Grand Trunk Pacific Lake Superior Branch—an operating surplus of \$1,488,833, as against an operating surplus of \$1,523,547.90 in 1921; the St. John and Quebec Railway, a deficit of \$148,078.67 compared with \$127,434.15 the previous year; Hudson Bay Railway, \$24,951.43 as against \$71,921.08 in 1921.

The Canadian Northern operating deficit was reduced from \$6,475,911.14 in 1921 to \$2,946,729.72 in 1922, but the operating deficit of the Grand Trunk Pacific increased from \$4,029,691.87 to \$4,292,866.41 during the same period.

## OPERATING RATIO

The operating ration for the year was 108·10, as compared with 112·77 in 1921 and 129·32 in 1920. The operating ratios of the component parts of the National System were as follows:

	1922	1921
Canadian Northern.....	104·85	109·37
Canadian Government.....	106·10	113·85
Grand Trunk Pacific.....	123·18	124·21

The ratio of 108·10 for 1922 is divided as follows: Labour, 60·74, as against 65·02; fuel, 14·01, as against 16·84; and other expenditures 33·35, as against 30·91.

## TRAFFIC RESULTS

The National lines carried 11,331,226 passengers during 1922, or 606,923 less than in 1921. The average haul per passenger was 60.84 miles, compared with 59.87 miles in the previous year, and the passenger earnings were \$17,919,602.17, a decrease of \$2,289,218.02 compared with 1921.

The system handled 22,426,402 tons of revenue freight, an increase of 1,164,803 tons. The average haul also increased from 423.19 miles to 449.97 miles, but the freight revenue, which was \$89,726,925.51, fell off \$3,901,611.86 because of lower rates.

The average earnings per traffic train mile were \$3.52 which was 8 cents less than in 1921, and the operating expenses \$3.82, which was 25 cents less than the previous year. The average operating revenue per mile of road was \$6,885.33, which was \$438.16 less than in 1921, and the average operating expenses per mile of road was \$7,466.23, a decrease of \$817.30. The average load per freight train increased from 482.66 tons to 548.34 tons.

## ANALYSIS OF OPERATING EXPENSES

Out of each dollar spent by the National Railways on operating account during 1922, the following expenditures were made: 24.13 cents for maintenance of way and structures; 23.53 cents for maintenance of equipment; 2.23 cents for traffic expenses—soliciting, etc.—46.57 cents for rail line transportation—enginemen, trainmen, yardmen, station employees, etc.—1.42 cents for miscellaneous operations—dining and buffet, hotels restaurants, etc.—2.79 cents for general expenses—general offices, clerical and legal staff, etc.—and 0.67 for transportation for investment—i.e., the movement of materials entering into the property.

The distribution of operation expenses is shown also in another form: labour, 56.19; fuel—loccomotive—12.96; other expenses, 30.85, total 100.

## LABOUR

Out of gross earnings of \$120,135,956.71, the management paid out \$82,390,245.42 in wages, including betterments, about six and a half million dollars less than the 1921 total pay-roll. Operating labour cost \$72,969,378.48, or almost 10 millions less than the previous year. The ratio of operating labour costs to gross earnings was 60.74 for the system, as against 65.02 in 1921. The average number of employees in 1922 was 58,398 compared with 60,315 in 1921, a decrease of almost two thousand.

GRAND TRUNK NET DEFICIT

As will be seen from the foregoing, the operating revenues, all lines, were \$113,975,133.30 last year as against \$109,097,557.58 in 1921; the operating expenses \$100,045,266.23 as compared with \$104,725,039.93 the previous year. After deducting taxes, hire of equipment, joint facility rents, etc., expenditures which affect the western lines somewhat heavily, income other than from operation brought the net income before fixed charges up to \$12,064,827.42. Fixed charges amount to \$21,213,375.64. Of this sum \$4,745,762.61 is due the government and \$16,467,613.03 payable to others. Taking into consideration these fixed charges the Grand Trunk net deficit, all lines, was \$9,148,548.22, as compared with \$15,672,299.34 in 1921, a decrease of \$6,523,751.12. The net deficit was apportioned as follows:

	1922	1921
	\$ cts.	\$ cts.
Canadian Lines.....	5,735,386 48	7,386,170 97
Western Lines.....	1,277,747 20	4,797,177 55
New England Lines.....	1,398,600 35	1,881,093 84
Central Vermont.....	736,814 19	1,607,299 34
Total.....	9,148,548 22	15,672,299 34

The net deficit of \$9,148,548.22 was distributed as follows:

	\$ cts.
Grand Trunk Canadian Lines.....	5,620,814 37
Ottawa Terminals Railway.....	113,769 09
Canada Atlantic Transit Company.....	82,454 25
St. Clair Tunnel Company.....	231,852 26
Toronto Terminals Railway.....	203,091 48
Terminal Warehouse Reg.....(Cr.)	250,000 00
Canadian Express Company.....(Cr.)	266,594 97
Grand Trunk Western Lines.....	1,277,747 20
Grand Trunk New England Lines.....	1,398,600 35
Central Vermont Railway.....	736,814 19
Total.....	9,148,548 22

GRAND TRUNK TRAFFIC

The operating revenue of the Grand Trunk System, exclusive of the Central Vermont, was \$106,348,507.11, an increase of \$4,386,702.59. Of this amount \$17,566,692.55 was on passenger account, a falling off of \$1,668,459.55. Freight revenue was \$79,716,164.68, an increase of \$5,712,983.97; other revenue—mail express, etc.—\$9,065,649.88 showed a slight increase.

Operating expenses were \$93,525,165.61, a decrease of \$3,887,314.84. This decrease was common to maintenance of way and structures, transportation, miscellaneous, and general offices. Maintenance of equipment cost more than in 1921, as also did the traffic department.

Operating ratio was 87.94 per cent as compared with 95.53 in 1921.

Tons of freight carried were 29,942,949, an increase of 2,688,163, though the average ton mile revenue fell off 4 per cent. Passengers carried numbered 12,401,927, a decrease of 1,124,181. There was a decrease of 5 per cent also in the average revenue per passenger mile.

## SESSIONAL PAPER No. 32

## SEPARATELY OPERATED COMPANIES

A number of separately operated subsidiary companies are controlled by the Grand Trunk, the net surplus of which is not taken into the Grand Trunk income statement. These include the Chicago, New York and Boston Refrigerator Company, International Bridge Company, Montreal Warehousing Company, Limited, Terminal Warehousing Company, Limited, Oshawa Railway, Rail and River Coal Company, Thousand Islands Railway, Montreal and Southern Counties Railway and the Central Vermont Transportation Company.

The net income of separately operated companies was \$712,123.24, as against \$381,439.05 in 1921. These separately operated companies paid to the Grand Trunk in dividends in 1922, \$576,300 compared with \$127,000 in 1921. and the undistributed surplus at December 31, last was \$151,671.16 compared with \$40,429.07 at the end of 1921.

## EMPLOYEES AND COMPENSATION

The average number of employees Grand Trunk System was 38,359 in 1922, compared with 39,234 in 1921, and corresponding figures for Central Vermont were 2,763 and 2,859. The average wage, Grand Trunk, was \$1,507.96 and Central Vermont \$1,566.91, a decrease of 5.49 per cent and 1.93 per cent respectively. The pay-roll expense of the Grand Trunk was \$54,016,242.75, or 57.76 per cent of the total operating expense. The pay-roll of the Central Vermont was \$4,109,420.19, or 63.03 per cent of the total operating expense. The ratio of pay-roll to operating expense decreased 2.83 per cent in the case of the Grand Trunk, but increased 6.81 per cent in the case of the Central Vermont.

Of each dollar spent by the Grand Trunk  $57\frac{3}{4}$  cents went in wages,  $15\frac{1}{2}$  cents in fuel for locomotives and  $26\frac{3}{4}$  cents in other operating expenses

## REPORT OF DEPARTMENTAL ACCOUNTANT

The total departmental expenditure for the year was \$21,213,373.80, divided as follows: Railways, \$5,113,072.30; Canals, \$7,548,024.80; general, \$8,552,276.70.

The grand total expenditure of the Department to Mar. 31, 1923, was \$1,304,620,743.28, of which \$1,064,250,248.19 was on railway account (including Quebec Bridge); \$202,165,744.41 on Canals, and \$38,204,750.68 general.

The principal expenditures during the fiscal year included \$5,695,669.05, operating deficits Canadian Government Railways; \$2,315,805.79, miscellaneous railway equipment; \$5,854,395.81, Canada Highways Commission; \$4,776,393.84, Welland Ship Canal, and \$2,551,603.87, expenditure connected with the Canal system in operation.

The grand total revenue received to Mar. 31, 1923, amounted to \$452,477,264.64, of which \$432,654,337.45 was on account of railways and \$19,822,927.19 on account of Canals. The revenue from Canals was \$742,410.46 for the year compared with \$804,518.58 the previous year. No tolls have been charged on the canals since 1903, and the revenue referred to is from hydraulic and other rents, wharfage and elevator charges. From the Port Colborne elevator the revenue received was \$356,740.43, an increase of \$62,181.92.

## ADVANCES TO THE RAILWAYS BY THE GOVERNMENT

Total advances by the Government of the Canadian Northern Railway, to December 31, 1922, amounted to \$298,799,591.72, on which interest amounting to \$51,333,156.66 had accrued. These advances were devoted to the following uses by the railway: construction and betterments, \$89,569,804.59; equipment, \$38,081,827.85; repayment of loans, including equipment trust obligations, \$49,364,435.04; operating deficits, \$21,093,292.27; fixed charges, \$100,690,231.97.

Total advances to the Grand Trunk Pacific Railway, to the same date, were \$90,538,034.75, on which interest amounting to \$20,924,521.32 had accrued. The advances have been applied to the following purposes; construction and betterments, \$31,512,074.66; equipment, \$6,417,729.83; operating deficits, \$25,985,065; fixed charges, \$26,623,165.26.

Total advances to the Grand Trunk Railway System, to the same date, amounted to \$84,560,342.60, and accrued interest \$7,967,405.29. The advances were required for the following purposes; construction and betterments \$3,755,003.42; equipment, \$7,246,495.98; repayment of loans, including equipment trust obligations, \$33,858,440.15; operating deficits, \$21,786,516.09, fixed charges, \$17,913,886.96.

#### STEPS IN THE REORGANIZATION

The reorganized National Railway Board was appointed on Oct. 4, 1922 as follows:—

Major General Sir Henry Worth	
Thornton, K.B.E.....	London, Eng.
John H. Sinclair, K.C.....	New Glasgow, N.S.
Richard P. Gough.....	Toronto.
James Stewart.....	Winnipeg.
Ernest R. Décary.....	Montreal.
Frederick G. Dawson.....	Prince Rupert, B.C.
Tom Moore.....	Ottawa.
Graham A. Bell, C.M.G.....	Ottawa.
Gerard G. Ruel.....	Toronto (now of Montreal)

On Feb. 12, 1923, Col. A. E. Talbot, of the City of Quebec, was also appointed a Director.

On Jan. 19, 1923, the whole of the Preference and Common Stock of the Grand Trunk Railway Company was, by Order-in-Council, vested in the Minister of Finance in trust for His Majesty.

Under date of Jan. 20, 1923, an Order-in-Council was passed handing over to the new Canadian National Railway Board the Management and operation of the Canadian Government Railways, designated specifically as:

- The Intercolonial Railway.
- The National Transcontinental Railway.
- The Lake Superior Branch, leased from the Grand Trunk Pacific Railway Company.
- The Prince Edward Island Railway.
- The Hudson Bay Railway.

and all other railways and branch lines vested in His Majesty, and comprising what had been known as the Canadian Government Railways. This Order-in-Council superseded and cancelled the Order-in-Council of Nov. 20, 1918, which had appointed the Canadian Northern Board to operate and manage these railways.

The unification of the Grand Trunk and Canadian National Railways was provided for by Order-in-Council of Jan. 30, 1923. The same Order brought into effect the Act to incorporate the Canadian National Railway Company and respecting Canadian National Railways (Chap. 13, 1919). This was followed on Feb. 5, 1923, by an Order-in-Council establishing the head office of the Canadian National Railways at Montreal, Que.

## SESSIONAL PAPER No. 32

After due consideration the new Management divided the combined and reorganized National Railway System into three regions for operating purposes:

*Atlantic Region:*—All lines in the Maritime Provinces as far west as, and including, Rivière du Loup, on the Intercolonial, and as far as, but not including Monk on the Transcontinental; headquarters, Moncton.

*Central Region:*—All lines from Rivière du Loup and Monk, Que., to Current Junction, on the Canadian Northern, 2 miles east of Port Arthur, and to Superior Junction, on the National Transcontinental, and including the Portland line and the lines west of the Detroit River; headquarters, Toronto.

*Western Region:*—All lines from Current Junction and Superior Junction, Ont., to the Pacific Coast, including Vancouver Island; headquarters, Winnipeg.

The Central Vermont, for the present, is being operated as a separate entity, with headquarters at St. Albans, Vt.

As to reorganization, Sir Henry Thornton, Chairman of the Board and President of the Canadian National Railways, stated, in a communication which the Minister of Railways made to Parliament on Mar. 27, 1923, that, when the new Management took charge, about Dec. 1, 1922, there had been three primary problems which demanded immediate attention:

1. The determination of the kind of an organization which was to be employed in the administration of the property;
2. The determination of the regions into which the property was to be divided for operating purposes and the location of regional and general headquarters;
3. The selection of officers for the various posts involved in the organization.

The organization which had been decided upon was what might be called a strengthened divisional organization as distinguished from a departmental organization. The executive officers consist of a chairman and president, assisted by five vice-presidents, as follows:

1. Vice-President in charge of operation, maintenance and construction.
2. Vice-President in charge of financial affairs.
3. Vice-President in charge of insurance, immigration, development, lands, express and telegraphs.
4. Vice-President in charge of legal affairs.
5. Vice-President in charge of traffic.

The above executive officers represent the minimum with which, in Sir Henry Thornton's judgment, it would be possible to operate such a property as the Canadian National Railways: indeed, as time goes on and traffic increases, it would, he stated, probably be necessary to add another vice-president. The list above given, however, represented a considerable economy.

Sir Henry Thornton added that, in dividing the railway into three regions for operating purposes, the principle followed had been to give to each operating region as much autonomy and local control in the actual operation of the property as consistent with efficient principles of administration. Every effort would be made to confine the functions of the vice-presidents and the executive officers to policies, leaving to general managers, general superintendents and superintendents the responsibility of carrying out details. He felt that in the administration of such a large property as is represented by the Canadian National Railways no other theory of organization could be successful.

THE CANALS

Although coal traffic during the 1922 season of navigation was considerably less than usual on the St. Lawrence canals, the season proved an unusually busy one, notwithstanding which there was comparative freedom from accidents involving interruption to traffic.

The volume of traffic on the Welland canal was somewhat in excess of the previous year. The total freight tonnage carried was 3,319,419, an increase of about 10 per cent, and in volume exceeded only by the record years of 1913 and 1914. Wheat shipments amounted to 58,415,300 bushels, the heaviest ever recorded.

The Government grain elevator at Port Colborne received 53,349,811 bushels of grain during the fiscal year, an increase over the receipts of the previous year of about 10 per cent, and over those of 1914 of about 35 per cent. The net earnings for the year were \$210,395.29.

## SESSIONAL PAPER No. 32

Consistent progress was made on the construction of the Welland ship canal. For purposes of construction, the canal is divided into nine sections, or contracts, numbering from the lake Ontario end. During the past year, work has been carried on on Sections 1, 2, 3, 4, and 5, progress on which may be summarized as follows:—

	Sections				
	1	2	3	4	5
	%	%	%	%	%
Rock excavation.....	94	57	70	.....	78
Earth excavation.....	86	76	64	30	95
Water-tight embankments.....	67	75	71	.....	.....
Concrete of all classes.....	82	49	19	2	.....

On account of strikes and various labour troubles, construction work on this canal was considerably retarded for some years after the resumption of work at the close of the war. Conditions in this respect have, however, improved materially during the past two years.

There was a falling off of traffic through the Canadian canal at the Soo, due apparently to the fact that on account of the greater depth, a large number of Canadian vessels prefer to make use of the American canals at that point.

For a number of years the question of the ultimate enlargement of the St. Lawrence Canal System between lake Ontario and Montreal has been studied by the engineers of this department, and much data relating thereto has been obtained. During recent years, the work of completing definite plans for such an undertaking became necessary in order to enable the department to deal intelligently with proposals by private corporations for the development of isolated water powers which might seriously conflict with the future development of the navigation and water power potentialities of the river as a whole. Under this impetus, plans have been evolved for a comprehensive development of the upper section of the river.

## REPORT OF CHIEF COMMISSIONER OF HIGHWAYS

The number of highway projects under agreement between the provinces and the Dominion, under the term of the Canada Highways Act of 1919, is 289. The Act provided for Dominion subsidies to road construction in the various provinces to the extent of \$20,000,000. Of this amount, \$9,788,404.98 has been earned on 2,490.30 miles of completed highway and 2,135.10 miles under improvement. The total mileage embraced in the projects under agreement is 5,994.59. The subsidizable cost of this work is \$37,974,910.24, and the estimated Dominion aid (40 per cent) of actual reasonable and necessary cost, \$15,189,964.15.

The five years permitted the Provinces to earn the \$20,000,000 of federal subsidies expiring in April, 1924, Parliament, at its recent session, extended the time during which this Federal aid might be earned by two years. The only province which has failed to qualify for aid under the Act is Alberta.

The year 1922 was exceptionally favourable for work of highway construction and improvement and steady progress was made in all the provinces which have undertaken highway improvement programmes. In certain of the provinces not only was the programme of construction as originally planned completed, but a considerable amount of additional work was also undertaken and carried out. This consistent progress was due to exceptionally favourable weather, more efficient and more available labour at lower rates, and an adequate supply of materials, also at lower rates. The letting of contracts in winter also enabled contractors to familiarize themselves with the layout of their season's work and plan it to better advantage. Costs, which had been very high during 1920 and

1921, have receded somewhat and are now more nearly on a par with 1919, but are, roughly, still 50 per cent above the pre-war basis. The present has come to be accepted more or less as the new standard of road costs.

During the year under review, 112 projects were agreed to, covering 1,206.94 miles, at a total cost of \$9,265,055.27, towards which the Dominion's contribution would be \$3,706,022.11. The average cost per mile, as a whole, was \$7,676.43, but the average cost per mile in the several provinces varied greatly with the character of construction. Ontario's projects were the most costly, averaging \$34,252.39 per mile; British Columbia, \$23,918; Quebec, \$10,840.58; Nova Scotia, \$5,730.15; Manitoba, \$3,895; Prince Edward Island, \$2,719.49; and Saskatchewan, \$2,199.16.

The average user of an improved highway often has little conception of what a highway costs to construct. In new and wooded country, the clearing may cost from \$200 to \$4,000 per mile. Cost of grading also varies with the nature of the country, and may range from \$500 to \$30,000 per mile. Bridges may cost from \$500 to \$500,000. (Federal aid is not applicable to bridges.) Culverts cost from \$500 to \$10,000 per mile of road; fencing right-of-way from \$500 to \$1,500; planting of shade trees, \$250 per mile; erection of crossing, danger and direction signs, guard rails, snow fences, etc., as required, \$200 per mile.

The above summary does not include construction of actual pavement, of which there are six general types:—

- (1) Cement concrete—Average cost per mile for this pavement 20 feet in width, \$35,300.
- (2) Bituminous concrete pavement—from \$33,400 to \$52,900 per mile depending upon character and thickness of base.
- (3) Bituminous macadam penetration—from \$22,000 to \$28,200 per mile, depending upon depth of base.
- (4) Water-bound macadam—from \$14,800 to \$17,400 per mile. Oil treatment from \$800 to \$1,300 per mile in addition.
- (5) Gravel roadway, \$4,700 per mile.
- (6) Improved earth, from \$1,000 to \$4,000 per mile.

There were procured during the year, twelve models of road culvert and bridge construction to be used as an educative exhibit, showing desirable features of design of modern roads. The types illustrated include sand-clay, gravel, waterbound macadam, bituminous surface treated macadam, bituminous macadam, penetration method, cement concrete, brick, cement concrete pipe culvert, iron pipe culvert, cement concrete box culvert, cement concrete arch culvert, and a T-beam cement concrete bridge. The size of the models is 30 inches by 18 inches, scale half inch to the foot, except the T-beam bridge which is 36 inches by 30 inches in dimension.

Educational literature as to the economic, social and national values of good roads was published during the year. A first edition of 1,500 copies of Bulletin No. 1, entitled "Canadian Highways and Roads," was soon exhausted and 1,000 additional copies as well as 500 in French were necessary. To promote interest in the activities in highway construction being conducted in the different provinces, and to give a national perspective to a national work 3,000 copies of the Highway Section of our last annual report were also published in bulletin form.

Circular No. 3, entitled "Motor Vehicle Registrations, Licenses, Revenues, Fees, etc., and Statistics of Entries into Canada for Touring purposes during 1921", also met with an appreciative reception, and had an influence in truing up motor vehicle legislation in two or three provinces.

Your obedient servant,

G. A. BELL,

October 2, 1923.

*Deputy Minister of Railways and Canals.*

## CANADIAN NATIONAL RAILWAYS

(Exclusive of Grand Trunk)

## ANNUAL REPORT FOR YEAR ENDED DECEMBER 31, 1922

## INTRODUCTORY

The present board was appointed in October and was therefore in office for less than three months of the year under review. It has been considered desirable to include in this report only the operations of those lines which were generally recognized as constituting the Canadian National Railways during the year. The three groups then so designated were the Canadian Government Railways, The Canadian Northern Railway Lines and The Grand Trunk Pacific Railway. Separate reports will be prepared for the Grand Trunk Lines.

The results of operation are those of what may be termed the fourth year of the Canadian National Railways—that collective title having been authorized for use in December, 1918.

## DIGEST OF OPERATIONS

Operations for the year show an improvement of \$6,484,017.87, the operating deficit being reduced by that amount as compared with 1921—and being an improvement of over twenty-seven million dollars compared with 1920.

The improvement in the net situation (or reduction of deficit) referred to, as compared with 1921 was achieved in the face of a reduction in gross revenue brought about by reduced passenger and freight rates and also in the face of a greater tonnage movement which, while requiring a considerably greater operating performance produced no increase in gross returns.

Earnings and expenses compare with the two preceding years as follows:—

	1922	1921	1920
	\$ cts.	\$ cts.	\$ cts.
<i>Gross Earnings—</i>			
Canadian Northern Railway.....	60,679,033 37	69,088,474 16	66,695,398 80
Canadian Government Railways.....	40,939,945 76	41,275,314 84	44,803,045 84
Grand Trunk Pacific Railway.....	18,516,977 58	16,638,677 64	14,408,549 66
Total.....	120,135,956 71	127,002,466 64	125,906,994 30
<i>Operating Expenses—</i>			
Canadian Northern Railway.....	63,625,763 09	75,564,385 30	82,953,978 60
Canadian Government Railways.....	43,436,667 67	46,990,047 74	55,445,651 29
Grand Trunk Pacific Railway.....	22,809,843 99	20,668,369 51	24,543,063 60
Total.....	129,872,274 75	143,222,802 55	162,942,693 49
<i>Operating Deficit—</i>			
Canadian Northern Railway.....	2,946,729 72	6,475,911 14	16,258,579 80
Canadian Government Railways.....	2,496,721 91	5,714,732 90	10,642,605 45
Grand Trunk Pacific Railway.....	4,292,866 41	4,029,691 87	10,134,513 94
Total.....	9,736,318 04	16,220,335 91	37,035,699 19

NOTE.—In considering comparative statistical data for the last three years it should be remembered that as regards traffic conditions on Canadian railways as a whole 1920 was an exceptionally good year and 1921 an exceptionally bad one. The improvement over 1921 which 1922 shows should therefore not be regarded as an advance, but merely as indicating that recovery is under way. Failure of 1922 traffic figures to equal those of 1920 is not of itself significant on account of the extraordinary conditions of 1920 which made that an exceptional year.

## EARNINGS

Gross earnings for the year 1922 decreased by \$6,866,509.93. Freight, passenger and express earnings were all less than in 1921.

As the loss in revenue due to the Crowsnest Pass Agreement Rates is estimated to be six and a half million dollars, that reduction stands out as the most important railway event of the year. Notwithstanding the reduction referred to, freight revenue increased its percentage to total revenue providing 76 per cent in 1922 as against 74 per cent in 1921.

The decrease in passenger traffic is discouraging, particularly as the quality of service given has improved and because the rate for passenger travel in Canada is relatively low being generally, slightly below the prevailing rates in United States. A good year was expected, but the traffic did not materialize. Passenger revenue declined 11  $\frac{1}{3}$  per cent and passenger travel measured by "passenger miles" declined 3.55 per cent.

## OPERATING EXPENSES AND PERFORMANCE

The results for the year show that working expenditures were well controlled, as there were reductions in expenses in the maintenance and transportation accounts. The condition of the physical properties was improved during the year, and yet maintenance-of-way expenses were reduced by \$2,656,340.92 and maintenance of equipment expenses by \$1,225,612.86. As already pointed out, more business was moved and yet \$11,299,471.65 less, in addition to the maintenance saving, was spent to move it.

There were small reductions in pay for certain classes of employees, and reduced cost of material had its effect in bringing about this result, but in the main the advance may be credited to greater efficiency of operation. The *average freight train load* of the System increased by 65.68 tons or by 13.61 per cent, whereas on a mile of road basis the increase in density of freight traffic was only 9.43 per cent. This average increase in train load was accomplished by obtaining in every month a substantial increase over the corresponding in the previous year, 22.4 tons being the lowest recorded, and the highest increase in any one month was over 100 tons. Other measures of increased efficiency may be mentioned, such as more miles obtained per car per day and a small increase in load per car mile. The cost of yard operation was also considerably reduced, measured on the basis of the number of cars handled.

## MILEAGE

The operated mileage as at December 31, 1922, was made up as follows:—

	Miles
Canadian Northern Railway System.....	9,752.86
Canadian Government Railways.....	4,649.44
Grand Trunk Pacific Railway.....	2,695.61
Total railway—Steam operated.....	17,097.91
Electric Lines of Canadian Northern Railway System.....	126.13
Total mileage operated.....	17,224.04

The following main line mileage was put into operation during the year:—

	Miles
In Manitoba—	
From Amaranth to Alonza.....	17.84
In Saskatchewan—	
From Lintlaw to Kelvington.....	13.84
"    Turtleford to St. Walburg.....	22.10
"    Melfort to Ridgedale.....	22.69
"    Demailn to Beechy.....	6.11
"    Gravelburg to West of Hodgeville.....	28.99
In Alberta—	
From Red Deer Jct. to Red Deer.....	6.10
In British Columbia—	
From Victoria to Koksilah.....	52.50
Total.....	170.17

## SESSIONAL PAPER No. 32

## FINANCE

During the year, an issue of \$11,000,000 Canadian Northern Railway Company 5 per cent three year notes, guaranteed by the Dominion Government, was disposed of at 99.03 per cent. The proceeds, together with accred interest and New York Exchange amounting to \$10,953,290.52, were used to retire maturing obligations, as follows: \$5,651,000 Canadian Northern Railway 6 per cent 2½ year collateral trust notes which matured on February 1, 1922; \$4,601,789.76 to purchase sterling exchange to retire \$5,109,027.67, Canadian Northern Railway 5 per cent Dominion Guaranteed Series "C" notes, which matured in London on April 5, 1922. The balance of \$700,500.76 was applied in reduction of the loan made by the Dominion Government under authority of War Measures Act and Order in Council dated July 5, 1918. The saving in exchange covering the retiring of the securities in London, amounted to \$507,236.91.

On June 1, 1922, \$1,250,000 Canadian Northern Railway 5½ per cent three-year secured notes, maturing at Toronto on that date, were retired from an advance from the Dominion Government, provided for in the appropriations.

\$6,000,000 Canadian Northern Railway ½ per cent three-year notes were paid off on December 1, 1922, from an advance made by the Dominion Government.

On December 1, 1922, \$7,099,493.34 Canadian Northern Railway 5 per cent land mortgage debentures held by the public, were called for redemption in London, England. It was thought advisable to redeem these securities on that date rather than wait until the date of maturity, namely June 1, 1923, in view of the rising sterling exchange rates. This step has been justified, as the exchange rate on December 1, was \$4.52, where as today (March 9, 1923) the rate is \$4.79. The funds necessary to retire these securities were advanced by the Dominion Government.

## BETTERMENTS

During the year extensive improvements were undertaken which have materially benefited the railways included in the system. 444.25 miles of new 85 pound rail were laid on important lines which permitted rail conditions on other sections to be improved. Tie-plates were provided for many sections; over a thousand miles of line were ballasted, 50 new water stations were completed, 342.4 miles of fencing were built, new structures erected included 41 new stations, 64 dwelling for employees; a number of additions were made to station buildings; 32 new bridges were built; 406 new culverts, and 163 bridges and trestles were filled. The programme of work included construction of farm and highway crossings, road-ways, ashpits, drop-pits, loading platforms, ditching and wells for station water supply, and the installation of track scales, turntables, inter-locking plants, machinery in shops and roundhouses, and the heating and lighting of stations, freight sheds, etc.

A most important group of improvements includes the extension of sidings and other yard and station trackage, 315 such improvements were undertaken aggregating 408,928 feet of track.

## CONSTRUCTION

The work under this head was largely confined to ballasting and surfacing branch lines in the Prairie provinces. No grading or track-laying on new lines was undertaken. Fencing and telegraph lines were built and stations and other structures required for new lines. The mileage turned over for operation is shown on page 20.

Co-ORDINATION

The betterment work undertaken during the year included a number of track connections and re-arrangement of facilities to enable the properties under consolidated management to be co-ordinated. This work will be continued as plans for the complete co-ordination of the various lines are developed.

Under this head reference may be made to the improvement known as the Long Lake Cut Off, a connection between the National Transcontinental and Canadian Northern Main lines east of Long lake, Ontario (north of lake Superior). This line had been under consideration for some time. Your present directors convinced of its value to the National System could see no justification for delaying action in the matter, and a contract for grading, bridging and culverts was let on December 30, 1922. The work is progressing favourably. The line will be 29.5 miles in length, but reduces the mileage between Toronto and other eastern points and Winnipeg by 102 miles as compared with the shortest route now available to the National System not involving use of other railways. Besides reducing mileage, it has many economic advantages.

ROLLING STOCK

The detailed statement of rolling stock appearing on page appendix 9 shows the following deliveries during the year 1922:—2 locomotives, 26 passenger train cars, 561 freight cars, 874 cars for road and other work.

WAGES

During the year 1922 wage adjustments were affected with various groups of employees which brought the general level slightly down. There were no strikes among the railway employees in Canada.

LANDS

Land sales for the year ending December 31, 1920, 1921 and 1922 were as shown in the following table. This table also shows the sales which had previously been entered into and which were, by mutual arrangement, cancelled during corresponding periods.—

Year	Actual Sales		Average	
1920.....	84,002.172 acres	\$1,738,801 46	\$20 70	
1921.....	17,031.15 “	321,042 08	18 85	
1922.....	9,025.53 “	150,531 14	16 67	
Year	Cancellations		Average	
1920.....	31,188.76 acres	\$ 412,557 19	\$13 22	
1921.....	17,032.08 “	273,720 56	16 07	
1922.....	114,056.663 “	1,599,278 69	14 02	

It will be seen that the actual sales for 1922 were considerably less than the sale for 1921 and that the acreage cancelled during the same period was greatly in excess of the cancellations for the previous year. This is a reflection of the very unsatisfactory conditions which prevailed during the year resulting in a large number of purchasers quit claiming their lands back to the company.

During the year it was also necessary to adjust some wholesale deals which had previously been entered into.

As at December 31, 1922, there remained unsold 825,008 acres, the increase being caused by the cancellations previously referred to. It was considered advisable in view of the lower prices being realized for the company's lands, to reduce the value at which these unsold lands are carried in the balance sheet, and this has been done.

## CONCLUSION

Due to the consolidation of the Grand Trunk System with these lines there will not be published any additional reports grouping only the operation of those lines which are covered by this report. The report of the previous board of directors for the year 1921 was in the nature of a three year survey of the operations and development of these lines as a Government-owned System. 1922 completes the four-year period of unified management of the former Canadian Government Railways and the Canadian Northern Railway System. The operations of the Grand Trunk Pacific while only under complete co-ordination since October, 1920, or  $2\frac{1}{4}$  years, have been included for the full period for comparative purposes.

During the period the Government has provided large sums of money for the physical improvement of these properties, for co-ordination facilities, for additional rolling stock and for branch line construction.

On behalf of the board, I would like to state that after inspection of the main arteries of the System, we find that the work undertaken has been well performed, and that the expenditures have been well applied. While the demands for capital expenditure on a system of such extent in a growing country, as the former board stated, are never ending, yet it may now be said that the three groups of lines, until recently the Canadian National Railways, enter the consolidation in excellent physical condition and operating at a high mark of efficiency as regards actual performance or movement of traffic and other factors controllable by management. Apart from certain well known cases of duplication the lines are well located and in exceptional position to successfully perform the transportation demands of the country. The problem as far as the lines covered by the report is concerned, is how sufficient traffic may be developed to carry the overhead and maintenance expenses. As far as transportation costs go, an economical performance is being made. Under these circumstances the margin for improvement with the present light volume of traffic is largely dependent on circumstances beyond the control of the management.

On some of the older sections there are still improvements that should be undertaken. but in the main the lines are modern in character and were built or have been brought up to standards which are ahead of actual traffic requirements, except under stress of seasonal movements.

The success of the National System in respect to these three groups is not entirely to be obtained by methods generally applied to railways which are not producing returns, viz:—improving the physical condition and operating methods—it is a matter of building up the country to support the railways.

On account of the situation outlined with reference to the lines previously comprising the Canadian National Railways, and to the fact that some time will necessarily be required to develop plans for improving the situation as it is now affected by the inclusion of the Grand Trunk Lines, and having in mind other conditions which the reorganization of so vast a system involves, your directors feel it necessary to warn the owners of the system that the present year is not likely to show any great advance in operating performance, except as the situation may be improved by increased traffic, and while there may be an improvement in the traffic returns in the months prior to the crop movement, it is rather optimistic to expect a greater seasonal movement that took place in the last quarter of 1922. As the rates over the entire year will be at a lower level, expectations of improved net are not likely to be realized. The present year then is to be regarded as one of transition in which the new machine will get down to its bearings and be ready for the greater effort which it is hoped

14 GEORGE V, A. 1924

traffic will demand of it in future years. The organization is new. Officers have been re-arranged and have much new territory and new conditions to consider. This, however, is expected to prove a feature of value inasmuch as experienced Railway men will view situations from new angles.

The whole reorganization has been accomplished with the best of good feeling generally prevailing, and I feel sure that the splendid loyalty which I found existing among the employees of the various lines now brought together is being rapidly transferred to the new administration and that the enthusiastic and constant team work will be forthcoming from the great army of men on the System's employ.

For the Directors,

H. W. THORNTON,  
*President and Chairman.*

MONTREAL, April, 1923.

Total of.....	\$ 30,128,029 93
The value of stores used and sold.....	23,530,478 25
Balance of general stores on hand December 31, 1922.....	\$ 6,597,551 68

## SESSIONAL PAPER No. 32

## PRINCE EDWARD ISLAND RAILWAY

The length of railway in operation at December 31, 1922, was 275.71 miles. The gauge is 3 feet, 6 inches. On 60.98 miles of railway there has been a third rail laid for standard gauge.

The cost of road and equipment to December 31, 1921.....	\$ 12,836,122 56
The expenditure during year ended December 31, 1922.....	138,430 54
Making the total cost on December 31, 1922.....	\$ 12,974,555 10
Gross earnings.....	\$ 835,774 24
Working expenses.....	\$ 1,480,713 43
Deficit.....	\$ 644,939 19

## NEW BRUNSWICK AND PRINCE EDWARD ISLAND RAILWAY

The length of railway in operation at December 31, 1922 was 36.05 miles.

The cost of road and equipment to December 31, 1921 was.....	\$ 788,950 96
The expenditure during the year ended December 31, 1922 was.....	61,677 48
Making the total cost on December 31, 1922.....	\$ 850,628 44

An amount of \$3,540 was paid as interest.

This railway is included in the operation of the Intercolonial Railway.

## INTERNATIONAL RAILWAY OF NEW BRUNSWICK

The length of railway in operation at December 31, 1922 was 105.14 miles.

The cost of road and equipment to December 31, 1921 was.....	\$ 2,936,064 29
The expenditure during the year ended December 31, 1922 was.....	26,843 75
Making the total cost on December 31, 1921.....	\$ 2,962,908 04

This railway is included in the operation of the Intercolonial Railway.

## NATIONAL TRANSCONTINENTAL RAILWAY

This line extends from Moncton to Winnipeg and is 1,997.88 miles in length, which included the Grand Trunk Pacific Branch line from Fort William to Superior Junction.

The cost of the National Transcontinental Railway to December 31, 1921, was.....	\$ 168,409,018 58
Expenditure during the year ended December 31, 1922.....	681,102 97
Making the total cost on December 31, 1922.....	\$ 169,090,121 55

The gross earnings and working expenses for the year ended December 31, 1922, compare as follows:—

Gross earnings.....	\$ 14,139,136 86
Working expenses (including \$600,000.00 rental Lake Superior Br.).....	14,120,975 04
Surplus.....	\$ 18,161 82

## MONCTON AND BUCTOUCHE RAILWAY

This railway extends from Moncton to Buctouche and is 29·93 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 256,011 10
Expenditure during the year ended December 31, 1922.....	36,881 49
Making the total cost on December 31, 1922.....	<u>\$ 292,892 59</u>

This railway is included in the operation of the Intercolonial Railway.

## SALISBURY AND ALBERT RAILWAY

This railway extends from Salisbury to Albert and is 44·77 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 494,925 71
Expenditure during the year ended December 31, 1922.....	13,183 28
Making the total cost on December 31, 1922.....	<u>\$ 508,108 99</u>

This railway is included in the operation of the Intercolonial Railway.

## ELGIN AND HAVELOCK RAILWAY

This railway extends from Petitcodiac to Havelock and from Petitcodiac to Elgin and is 26·16 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 137,088 42
Expenditure during the year ended December 31, 1922.....	3,113 88
Making the total cost on December 31, 1922.....	<u>\$ 140,202 30</u>

This railway is included in the operation of the Intercolonial Railway.

## ST. MARTINS RAILWAY

This railway extends from Hampton to St. Martins and is 28·75 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 289,285 36
The expenditure during the year ended December 31, 1922.....	10,409 23
Making the total cost on December 31, 1922.....	<u>\$ 299,694 59</u>

This railway is included in the operation of the Intercolonial Railway.

## YORK AND CARLETON RAILWAY

This railway extends from Cross Creek to Stanley and is 5·40 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 29,040 41
The expenditure during the year ended December 31, 1922.....	31,817 49
Making the total cost on December 31, 1922.....	<u>\$ 60,857 90</u>

This railway is included in the operation of the Intercolonial Railway.

## SESSIONAL PAPER No. 32

## QUEBEC AND SAGUENAY RAILWAY

This Railway extends from St. Joachim to Murray Bay and is 62·31 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 7,741,954 17
The expenditure during the year ended December 31, 1922.....	14,348 39
Making the total cost on December 31, 1922.....	<u>\$ 7,756,302 56</u>

This railway is included in the operation of the Intercolonial Railway.

## CARAQUET AND GULF SHORE RAILWAY

This railway extends from Gloucester Junction to Tracadie and from Pokemouche Junction to Shippegan and is 79·83 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 512,952 84
The expenditure during the year ended December 31, 1922.....	192,671 98
Making the total cost on December 31, 1922.....	<u>\$ 705,624 82</u>

This railway is included in the operation of the Intercolonial Railway.

## LOTBINIÈRE AND MEGANTIC RAILWAY

This Railway extends from Lyster to Deschaillons and is 29·56 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 343,588 77
The expenditure during the year ended December 31, 1922.....	10,247 39
Making the total cost on December 31, 1922.....	<u>\$ 353,836 16</u>

This railway is included in the operation of the Intercolonial Railway.

## CAPE BRETON RAILWAY

This railway extends from Point Tupper to St. Peters and is 30·64 miles in length.

The cost of road and equipment to December 31, 1921.....	\$ 103,026 76
The expenditure during the year ended December 31, 1922.....	3,280 20
Making the total cost on December 31, 1922.....	<u>206,306 96</u>

This railway is included in the operation of the Intercolonial Railway.

## HUDSON BAY RAILWAY

This Railway extends from The Pas a distance of 238·17 miles of which 214·0 miles are under operation.

The cost of road and equipment to December 31, 1921.....	\$14,345,583 37
The expenditure during the year ended December 31, 1922.....	8,578 39
Making the total cost on December 31, 1922.....	<u>\$14,354,161 76</u>
Gross earnings.....	\$ 32,625 66
Working expenses.....	57,577 09
Deficit.....	<u>\$ 24,951 43</u>

QUEBEC BRIDGE

The cost of bridge to December 31, 1922.....\$ 22,640,228 46

ST. JOHN AND QUEBEC RAILWAY

This railway extends from Centreville to Westfield Beach and is 157·84 miles in length, not including 13·96 miles running right Westfield Beach to St. John.

The gross earnings and working expenses for the year ended December 31, 1922, compare as follows:—

Gross earnings.....	\$ 279,070 92
Working expenses.....	444,588 48
Deficit.....	\$ 165,517 56
In addition to above amount 40 per cent of gross earnings charged to rental was.....	118,906 54
Total deficit.....	\$ 284,424 10

## SESSIONAL PAPER No. 32

## NEW MACHINERY INSTALLED IN SHOPS

Moncton .	{	1 Spring punch, shear and nibber combined.
		1 Spring stripping machine.
		1 Emery grinding machine.
		1 Lead and oil bath furnace.
		1 Automatic screwing machine.
		1 E.T. equipment test rack.
		280-ton electric travelling cranes.
		The following machines were made up:—
		4 50-ton hydraulic presses.
		1 Pony brake testing machine.
St. Malo . . .	{	1 Tie plug machine.
		1 Air brake testing machine.
		1 Job crane complete.
		1 No. 2 Brown and Sharp miller.
		1 No. 2 Brown and Sharp surface grinder.
		1 600-ton Southwark wheel press.
		1 Centering machine.
		1 Hanna pneumatic punch.
Transecona .	{	1 36-inch band saw.
		1 Combined punch and shear.
		1 Power hack saw.
		1 Bolt painting machine.
		1 Turret lathe.
		1 Automatic truing machine.
		4 Gap squaring and slotting machine.
		20 Charging trucks for foundry use.
		1 Boring mill.
		1 Jack and steel car frame straightened.
		1 Upright spreader drill.
		1 Coil winding equipment.
		1 Acetylene gas generator.
		1 Air cooling plant.
		3 Berwick electric rivet heating furnace.
		1 Tender drop pit jack.
		1 Wood chopping hog.
		1 Standard cylinder boring bar.
		1 Arch welding generator.
		2 35-ton Simplex geared jacks.
		1 Electric treating and annealing furnace.

## CANADIAN GOVERNMENT RAILWAYS

ANNUAL REPORT OF THE CHIEF ENGINEER FOR THE YEAR ENDED DECEMBER  
31, 1922

## ROADBED AND TRACK

The operated mileage of Canadian Government Railways on December 31, 1922 was as follows:—

	Main Line	Second Main Line	Passing Tracks	Other Sidings and Spurs	Total
Eastern Lines.....	3,802.45	68.72	305.04	774.82	4,921.03
Western Lines.....	390.25	4.80	34.65	91.25	520.95
Leased Lines.....	203.07		22.72	53.78	279.57
Joint Sections.....					
Running Right.....	57.35	38.35			95.70
Totals.....	4,453.12	111.87	362.41	889.85	5,817.25

## LINE CHANGES AND NEW LINES PUT INTO OPERATION

At Moncton the additions to and rearrangements of the yard were continued, and the cutoff between St. John and Harcourt Subdivisions, built last year, was put in operation during the month of December as Main Line track eliminating the portion of the old Main Line of Harcourt Subdivision between Moncton and Franklin Junction. By these changes Harcourt Sub-division has been reduced by 3.92 miles Main Line and 3.03 miles Second Main Line while 3.45 miles of Main Line have been added, thus making a net reduction of 3.50 miles Main Line in this subdivision. On the St. John Subdivision there was an addition of 1.31 miles Second Main Line and a reduction of 0.03 miles Main Line, making a net addition of 1.28 miles of Main Line in this Subdivision.

## SESSIONAL PAPER No. 32

## TERMINAL IMPROVEMENTS

*Halifax Ocean Terminals.*—A heated compartment was constructed in shed 24 for use of C.G.M.M., for handling perishable freight. Office of Canadian National Express remodelled and painted. Additional facilities provided for Stores Department in car repair building and high platform constructed for handling oil from cars. Steam pipes laid in gutter of train shed to prevent their blocking by snow and ice.

*Deepwater.*—Extensive repairs made to new pier No. 2. The concrete superstructure given a coating of gunnite. Part of the roof was relaid with Arco-Top. The gutter and down-spouts were repaired. Repairs were made to fenders, girders, floor slabs, piles, etc., where damaged by steamers *Empress of Scotland* and *Cameronia*.

*Truro.*—Six stalls of enginehouse were extended ten feet to accomodate Sante Fe locomotives. An additional drop pit was constructed.

*Stellarton.*—Foundation and track alterations completed for new 150-t track scale. All ready for installation. New drop pit constructed in enginehouse.

*Mulgrave.*—Portion of wharf at freight shed was rebuilt where crushed in by ice last spring. Work of renewing pedestals and protection crib under transfer apron begun last year and was carried to completion. Transfer cleaned and patch painted and rivets in floor system renewed.

*Point Tupper.*—Work of renewing pedestals and retaining wall under transfer apron begun last year was continued and 90 per cent completed. Portion of spring piling was replaced with creosoted material of greater length transfer cleaned and painted, and rivets in floor system renewed. Section of wharf renewed where crushed by ice.

*Sydney.*—Boilerhouse rebuilt and two second hand boilers installed. Drop pit installed in enginehouse.

*St. Peters.*—Enginehouse rebuilt. New ashpit constructed.

*Pictou.*—100 feet of permanent wharf constructed at freight shed wharf.

*Charlottetown.*—12,000 square feet of concrete platform was replaced with wood. A frost proof warehouse was constructed in shed on railway wharf.

*Borden.*—About 5,300 tons of heavy stone and spalls were placed outside the existing pier forming additional protection from sea wash. 150 cubic yards of concrete was placed under and along the face of the concrete pier, forming the steamer berth, where it was scoured out by the action of the ship's propellers. The rigid fenders at the outer end of the pier were repaired and additional timbers placed to strengthen the work.

*Summerside.*—450 lineal feet of the approach to the wharf was rebuilt, using old tie construction.

*Cape Tormentine.*—The turning basin and entrance channel were further dredged to permit of sufficient water for the Car Ferry at low tide. Repairs were made to docks where scour had been caused by the propellers, of the steamer.

*Sackville.*—Foundation was installed in enginehouse to permit raising of locomotives for repairs. Heating system in station and baggage room overhauled and repaired.

*Moncton.*—Yard re-arrangement was continued consisting of relocation of main line and construction of 1.7 miles of new double track. Re-arrangement of the coach yard and yard tracks at West end, the demolition of old enginehouse and coaling plant, and installation of transmission lines from powerhouse to new round house. Concrete platforms at station were repaired and

new wooden platforms constructed. General offices were cleaned, repaired and painted, new lavatory installed on third floor, gutters and down spouts renewed, and lighting system in Superintendent's office was re-arranged and improved.

*Mechanical Shop.*—Concrete floor laid in brass moulding shop. Portion of roof of freight car repair shop was insulated. Alterations and improvements were made in stores building. Other general repairs and renewals to buildings were carried on.

*St. John.*—Re-arrangement of Island yard was completed. A new yard office was built, a new 150-ton track scale was erected, boilers were taken from old power house and installed at enginehouse and extensive repairs were made to Long wharf and trestle approach.

*Bathurst.*—Leanto built on enginehouse to shelter the electric car. Tool house extended for electrical department.

*Shippegan.*—Old timber platform at shore end of Public wharf was replaced with cinders.

*Tracadie.*—The wye started late in the fall of 1921 was completed this year.

*Campbellton.*—Two oil tanks were erected to supply fuel for steam unit car. Ashpit was renewed.

*Edmundston.*—New resthouse was completed. New drop pit was constructed in engine house.

*Rivière du Loup.*—Roof over 10 stalls of enginehouse renewed, new cone drop pit installed and Taylor and Arnold Jack provided. New office building 22' x 16' built to provide larger quarters for Round-house foreman and staff. Boilers in shop repaired. Train service pipe in yard extended 200 feet and one additional coach hydrant installed to facilitate watering passenger trains at this point. Galvanized Iron shed built for Stores Department.

*Joffre.*—General repairs and renewals made to enginehouse.

*Monk.*—General repairs and renewals to facilities at this point.

*St. Malo Shops.*—General repairs and renewals made to the different shops.

*St. Leonard Junction.*—Robert & Schaefer type 100-ton coaling plant has been dismantled and erected at this point, new water proof concrete boot built and pump installed to drain same on account of Robert & Schaefer type 100-ton coaling plant from Rideau, Ont., was dismantled and erected at this point, new water proof concrete boot built and pump installed to drain same on account of the extreme depth (22 feet). New motor house has also been built and gasoline motor installed to operate plant. New water supply has been installed consisting of a 40 H.P. vertical boiler and Canadian Fairbanks Morse 10 x 12 steam pump located in wooden frame building erected near the Nicolet River wherefrom the water is taken. The suction pipe which is a 6-inch cast iron pipe is about 100 feet long with a lift of 16 feet. The delivery pipe is also a 6-inch cast iron pipe 1,525 feet long with a total head of 110 4 feet to top of water. The tank was raised 15 feet to increase flow of water at stand pipes. New stanepipe has been installed on the Nicolet Subdivision to provide water for trains operating over this S. D., the original standpipe located on the Drummondville subdivision having been moved to a point east of the junction switch. The station platform was extended 100 feet along the Nicolet subdivision to provide more standing accomodation for trains. New standard brick lines standard ashpit 50 feet long has been installed on passing siding, and an 8 inch terra cotta drain pipe 1,000 feet long has been laid, with suitable connections, to receive drainage from coaling plant, standpipe pits, ashpit and overflow from water tank.

## SESSIONAL PAPER No. 32

*Ste. Rosalie Junction.*—Exterior of yard office painted and storm windows installed. All necessary repairs and renewals made to enginehouse. Coal-hoist raised to facilitate coaling Grand Trunk Railway engines. In order to provide water for locomotive shop and other buildings at this point a water pipe line 10,050 feet long has been laid to the City of St. Hyacinthe, where connection was made with the city main on Gèrouard street, just north of the subway under the Grand Trunk Railway. The above pipe line consists of 2,050 feet of 10", 1,800' of 8", and 5,700 feet of 6" cast iron pipe as well as 500 feet of 10" steel pipe, and was laid on the Grand Trunk right of way about 30 feet north of the W. B. main line between Yamaska River Branch and Ste. Rosalie Junction. The 500 feet of 10" steel pipe which was used in crossing Yamaska River was placed in steel brackets on the Grand Trunk branch and covered with insulation to withstand a temperature of 40° below zero without freezing, one 10" extension joint was also installed on this point, suitable valves were installed at different points on the pipe line and four hydrants installed at Ste. Rosalie Junction; also float valve installed in water tank. In order to accurately measure the water supplied by the city of St. Hyacinthe, two Trident Crest water meters were installed, one 10" near connection with the city supply at St. Hyacinthe and 6" near Ste. Rosalie Junction. A drain pipe 7,000' long also laid in the same trench as the water pipe (but lower, to obtain the necessary grade) consisting of 6,000' of 10" and 1,000' of 12" Terra Cotta pipe, with a minimum grade of 0.2 per cent and draining into a stream located about 7,000 feet east of Ste. Rosalie. Ten manholes were installed at suitable intervals in the yard to drain turntable pit, standpipe pit, ashpit, shop and various other buildings.

*Fitzpatrick.*—The walls and ceiling of station were repaired also station platform. The brick walls of roundhouse were repaired. 100-foot standard ashpit was built with proper drainage. The boxing and steam pipe to pump was renewed as well as the air line to coal chute, and the four-inch cold water main to roundhouse was renewed. The exterior of the bunkhouse was repainted and the interior thoroughly disinfected. An electric light line was installed across the yard and electric lights were placed on the station platform.

*Parent.*—The ten double employees dwellings which about 25 per cent completed in 1921 are now 70 per cent completed. The water supply for the dwellings is about 50 per cent completed and the sewerage 80 per cent. The electric light line is about 50 per cent completed. A 6-foot extension has been constructed at the end of the pump house for the use of the chlorinator. A 30' x 30' extension to the store-house has been built, also platform built in rear and at the east end of the storehouse and a spur line, 354 feet long for unloading of stores has been built. A gasoline storage shed 20' x 20' was constructed. The rivets in the turntable were gone over and tightened where necessary and the superstructure given a coat of paint. The centre and conical rollers were renewed. The ground floor of the station building was renewed in hardwood, and the 4" water main in roundhouse replaced.

*Doucet.*—The station, ice house and freight shed were painted, and a tower was erected on the top of the station for the installation of meteorological instruments. The roof of roundhouse was repaired and the air line to coal chute renewed. The turntable was gone over and the rivets tightened where necessary. The island wood passenger platform replaced by cinders. The catch water ditch in rear of station was deepened permitting the automatic drainer to be replaced with a 6" tile drain. Fire hose was placed in bunkhouse.

*O'Brien.*—The ground floor of the station was renewed in hardwood, the roof of roundhouse repaired, also the 4 inch water main in same renewed. Fire hose was replaced in bunkhouse and the air line renewed. The pumphouse which was destroyed by fire was rebuilt and the gasoline pumping plant repaired.

The large offtake ditch 5,100 feet long, which drains O'Brien yard was deepened and enlarged at drain into the river on the south side and a ditch excavated at the east end and four culverts placed under the tracks to allow the free drainage of the yard.

*Cochrane.*—Twenty foot extension built to storehouse and platform at same extended, steel roof trusses in machine shop, power-house and boiler room repainted. Wood floor of roundhouse repaired. General repairs made to coaling plant. Six concrete pedestals thereof which had heaved with frost straightened and levelled. Coach wheel drop pit installed. Fire hose provided in second floor of trainmen's Resthouse. Additional Firehouse provided for Terminal Hydrants.

*Hearst.*—Plaster in ceilings of station repaired, Mastic concrete floor laid in station lavatory. Steel trusses in fan room and power-house painted. Defective concrete in centre pier of steel water tank out and replaced. New floor put in ice-house. Timbers under track at cinder hoist renewed.

*Grant.*—Plaster in station ceilings repaired mastic concrete floor laid in station lavatory. Repairs made to roof roundhouse. Defective sills and posts in coaling trestles renewed. Pipe line from pumphouse to tank repaired. Additional fire hose provided to second floor of trainmen's resthouse.

*Armstrong.*—Plaster in station ceilings repaired. Mastic concrete floor laid in station lavatory. Portion of station platform renewed. Fire hose provided in second floor of trainmen's resthouse. Additional fire hose provided for Terminal Hydrants. Steel water tank painted. Two standpipes painted. Roundhouse roof repaired. Roof trusses painted. Plaster repaired in section-houses.

*Sioux Lookout.*—As noted in detail, under "Additional Trackage" and "Buildings"—the storage capacity of this yard has been increased 137 cars, by the additional two through sidings, and new enginehouse facilities are being erected to comply with standard layout, west of the enginehouse, to replace present out-of-date facilities, which are expensive to maintain and uneconomical to operate. In conjunction with these alterations, Leads and Ladder tracks have been rearranged to conform with the new layout. Work has been commenced on an extension to the enginehouse in order to provide greater length for the proper handling of Mikadoes and larger class of power. An employees' boarding and recreation building is in course of construction. The public Hospital commenced in 1921—erected on Railway property by public subscription—has now been completed, and is in operation.

*Redditt.*—As noted under "Additional Trackage" the storage yard capacity was increased 104 cars by an extension at the East end. Five tracks are now able to accommodate an average train, thus doing away with the necessity of cutting trains when entering this yard, and blocking leads and switches when making trains up for departure.

*Transcona.*—The capacity of the yard has been increased 285 cars, by the laying of 12,220 feet of additional trackage. A lavatory with water and sewer connections was installed near car repair tracks, and additional hydrants provided for fire protection.

*Water Service and Sewers.*—Repairs were made generally throughout the Districts to pipe lines and tanks to keep them in working order and ensure proper service,—the more important work being as follows:—

*Halifax Ocean Terminals.*—All Fire Hydrants, water mains and steam lines throughout the yard, as well as heating and plumbing systems in the railway owned houses, were thoroughly inspected and repairs or renewals were made where necessary.

## SESSIONAL PAPER No. 32

*Deepwater Terminals.*—The steam heating system in freight shed, elevator and pier No. 2 repaired for winter service. A steam boiler was installed at Pier No. 2, as an independent heating unit for the hospital.

*Elsdale.*—The old wooden tank was replaced by a new 40,000 gallon steel tank on concrete foundation.

*Stellarton.*—New supply pipes laid from City Main to tank and meter installed on same.

*Piedmont and Bayfield Road.*—New cribs and earth dams constructed by which the gravity supplies at these points were considerably increased.

*River Denys.*—Substructure for the new 40,000 gallon steel tank was completed ready for the erection of the tank.

*Folleigh.*—A new 40,000 gallon steel tank on concrete foundation was erected, work being about 98 per cent completed. Coal house from Londonderry was converted into pumphouse for new tank.

*Maccan.*—A new electric pump was installed in station replacing old pump.

*Moncton.*—A new water, steam, vacuum and gas pipe system was installed in new coach yard.

*Sussex.*—A 40,000 gallon water tank was removed from Moncton and erected at Sussex.

*Brockville.*—A Cesspool was provided for the station sewerage.

*Charlo.*—Drain from the station was connected with sewer to the Bay.

*St. Quentin.*—Well bored to provide domestic water supply for agent.

*Burnsville.*—Water station completed early in December consisting of a 20,000 gallon tank with a battery of 2 No. 40 Rife Hydraulic rams, pumping the water from reservoirs.

*At McGirney Junction, Juniper, Glendyne, Holliday, Estcourt, Lapointe, Pelletier,* kerosene vaporizers were placed on gasoline engines of pumping station.

*St. Eugene.*—Temporary water supply installed on Ballast pit spur for spotting engines.

*St. Casimir.*—The gasoline pumping plant which has existed from construction days has been changed to electrical drive by installing a motor. A distance switch for winter operation and a float switch for summer operation installed.

*Hervey Junction.*—A 10" standpipe was installed with necessary drainage and connection made by a 6" supply main to 50,000 gallons standard NTR water tank.

*La Ferme.*—The 50,000 gallon wooden tank which was destroyed by fire, Dec. 6, 1921, is about 90 per cent completed.

*La Sarre.*—Station and section house supplied with water from town main. Fauquier.—Station and section house supply with water from railway tank.

*Hearst.*—Emergency dam built and new well dug at intake pipe on account of low water in Matawishquia River.

*Savoff.*—New dam built in stream supplying water to tank.

*Webster and Ycliff.*—Repairs were made to pipe lines.

*Minaki and Elma.*—Tanks were repaired and cleaned out.

*Griff and Larson.*—Pipe lines were repaired.

*Alcona.*—Water tank was repaired.

## DAMAGE BY FLOODS AND HIGH TIDES

On November 17, high tides caused considerable damage on the Sydney subdivision at four locations, requiring 1,700 cubic yards of rock and train fill to repair same.

On August 24, high tides resulted in a washout on the Sackville Subdivision, Mile 40-47, and on Springhill Subdivision, at Mile 97.5. The track at both these locations has since then been raised to a higher elevation than that of the high tide.

On August 26, heavy rains damaged 12 culverts on the St. Martins Subdivision, also considerable damage to the foundation of frame trestle at Mile 13.2. Small land slides occurred at Miles 13.8 and 26.4.

Continuous rains for two weeks prior to June 22nd caused a number of washouts on Leonard Subdivision between Miles 2 and 29. All traffic was held up from the 22nd until the night of the 26th. Cost to repair the damage was about \$8,500.

On June 23, excessive rain caused ditches east of summit yard to overflow resulting in 600 feet of ballast shoulder being washed away.

At Mile 43.78 Manouan Subdivision, on April 8, a small washout of embankment 50 feet long by 8 feet deep occurred. Temporary trestle was put in and later permanent work was completed by filling. No damage to culvert occurred.

Excessive high water caused a washout behind southwest wing wall of Mattagami river, Bridge Mile 31.4 Kapuskasing Subdivision. Prompt steps were taken to repair damage and no delay to trains were caused.

Water elevations of streams and lake in vicinity of Brinka. Quibell Subdivision rose to abnormal height on May 11, due to heavy rainfall and 100 feet of track was washed out at Mile 118.5 and 105' at mile 119.8.

Due to heavy rainfall on May 11, several small slides occurred in clay cuts, between mileages 3 and 5, Minaki Subdivision. These were cleaned out by mechanical ditcher.

## DAMAGE BY FIRE

On July 13 tool house at Tatamagouche was destroyed by fire.

On July 20 at Murrays one car loaded with lumber was destroyed and another badly scorched, and on October 20, 200 track ties were destroyed. Both of these fires originated in lumber piles adjacent to tracks.

Near Alma fire which originated in ash pile destroyed 50 feet of cribwork at Mile 73.5.

On September 14 fire which originated in lumber pile destroyed the station and freight shed at Elgin. Damage about \$2,150.

On May 2, a slight fire in Hampton station caused damage to the extent of about \$30.

On June 25 and July 29 fire caused damage to old enginehouse at Moncton amounting to about \$250.

## SESSIONAL PAPER No. 32

On January 31, fire totally destroyed the Yard Office in Island Yard, St John. Damage about \$1,500.

On September 24, fire destroyed an old wooden culvert at Mile 11.4 Car-aquet Subdivision.

On May 22, fire which originated in Fraser's Mill at Baker Brook destroyed a section tool house; cost to replace about \$330.

On August 27, at McGivney Junction a spark from a boarding car started a fire in a B. and B. tool car, C.G.R. 18726, resulting in a loss of about \$700.

On November 24, the pumphouse at Holliday was damaged by fire to the extent of \$200.

At Old Lake, road section tool house destroyed.

At Riviere Ouelle, 8 box cars and 200 track ties destroyed.

At Ville Marie, 7 telegraph poles destroyed.

At Mile 3.0 to 5.0 Diamond Subdivision, 11 telegraph poles, 590 fence posts and 240 track ties destroyed.

At Carrier, shim shelter destroyed.

At St. Malo shops, damage done to blueprinting room in office building.

At Amos on September 29 the privy, N.T.R. Stn., was destroyed by fire, the fire starting from an unknown origin.

At O'Brien on February 15, the pumphouse was totally destroyed by fire and also the gasoline pump injured. The pumphouse has been rebuilt and the engine repaired. The cause of the fire was an overheated stove.

At Hyland, station destroyed by fire June 4.

At Pagwa, tool house destroyed by fire March 30.

At Mission, switchmen's shanty was destroyed by fire on January 2.

At Redditt, two of the engine house doors were damaged by fire on April 30.

## BRIDGES AND CULVERTS

Maintenance repairs generally were carried on throughout the Districts to keep all bridges and culverts in proper condition. The following list shows some of the work carried on:—

Masonry in bridges grouted and repaired.....	34
Masonry in culverts.....	2
Bridge decks renewed.....	59
Steel bridges cleaned and repaired.....	218
Second hand steel spans placed and painted.....	2
Openings replaced with concrete slabs.....	10
New concrete abutments built.....	6
Standard timber trestles.....	1
Openings replaced with reinforced concrete culverts.....	8
Openings replaced with concrete pipe culverts.....	138
New concrete pipe culverts.....	51
New concrete culverts.....	4
Concrete arch culverts built.....	5
Stone culverts repaired.....	3
Timber trestle repaired.....	53
New wooden culverts built.....	35
New bridge seats.....	3
Minor repairs to other culverts.....	317
Trestles filled.....	5

## CONCRETE PIPE

The following concrete pipe was manufactured on the Districts:—

	Feet
18-inch circular.....	1,786
24-inch ".....	1,493
30-inch ".....	935
36-inch ".....	862
24-inch arch.....	2,970
30-inch ".....	1,340
36-inch ".....	1,686

## SURVEYS AND TRACK CENTERING

7.07 miles of track were centered and curves spiralled and 156.85 miles of rechainage run.

Surveys for plans of station yards, bridges, culverts, sidings road diversion, ballast pit and other improvements along the railway have been carried on, yard plans and records have been revised, deed and lease plans made and other miscellaneous information secured for reports and appropriation work.

## TRACK SCALES

These were maintained and kept in proper working order throughout the districts generally, repairs being made where necessary. At Stellarton the work of installing a new 150-ton track scale was about 80 per cent complete, the track rearrangements and foundation being finished and all ready for erection of steel. At St. John a new 150-ton track scale has been installed. At Hervey Junction track scale was removed and shipped off division. At Hearst new track scales provided and existing concrete foundation repaired and raised.

## TURNTABLES

These were cleaned, maintained and kept in proper working order throughout the Districts generally, repairs being made where necessary. Turntable 75 feet long at Bridge was taken up and shipped to Yarmouth, N.S., Halifax and Southwestern Railway.

## SIGNALS AND INTERLOCKING

These were maintained and kept in proper working order throughout the Districts generally, repairs being made where necessary. The more important works carried out during the year were as follows:—

Wigwag crossing signal installed at Bedford.

Electric crossing bells installed at St. Alexis, Bic and at Broad street, Kensington, P.E.I.

Automatic signals between Moncton and Sackville completed and new one installed at Maccan. Electric Bell was installed on water tank at Sussex.

## ELECTRIC POWER AND LIGHTING

These facilities were maintained and kept in proper working order throughout the Districts generally, repairs to plants and lines being made where necessary. Among the more important works carried out were the following:—

Altered transmission lines and lighting necessitated by extension at Truro enginehouse.

Complete installation of motor equipment, with circuit, transformer, etc., for new air compressor at Stellarton and installed meters in lighting and power circuits for coaling plant at same place.

Removed car battery charging plant from Sydney and installed same at Charlottetown.

Installed electric wiring and light in stations and freight sheds at Cardigan and Georgetown.

Complete installation of power and lighting systems for new engine terminals at Moncton, also completed removal relocation and extensions of transmission lines and circuits through the yard to suit the new layout of tracks.

Completed alterations and additions to lighting and power systems at mechanical shops.

## SESSIONAL PAPER No. 32

Installed electric lights for track scales at Campbellton, Edmundston and South Devon.

Replaced defective wiring and circuits throughout S.S. Prince Edward Island and installed new circuit to the new electric range.

Electric lights installed in station and on platform at St. Marc and St. Casimir.

Electric lights installed along platform at Pointe a Pic and La Malbaie.

## POSTS AND SIGNS

Section limited boards, mile posts, highway crossing signs, Yard limit boards, station signs, and switch targets, etc., were painted and repaired where found necessary throughout the districts.

## CAR FERRIES

*S. S. Scotia I and II.*—These vessels were drydocked and put in proper shape to pass marine inspection.

Hulls were scraped and painted, plates riveted, propellers and shafting drawn, examined and readjusted, ventilators renewed, new wood guards put on, capstans repaired, upper works cleaned and painted, engines, pumps, piping and wiring overhauled and repaired where necessary, boiler thoroughly cleaned inside and outside and furnaces repaired and reset.

*S.S. Prince Edward Island.*—This vessel was put in drydock at Halifax and thoroughly overhauled and painted. repairs and readjustments were made where necessary to plating. Engines, boilers and fittings and everything put in proper condition after the winter's service. The dining room was rearranged, and a lunch counter service substituted. Considerable alterations were necessary to effect this change and an additional power circuit from engine-room to pantry connecting up the new electric range was installed.

## MAIN LINE CHANGES

Preliminary work consisting of bridge and culvert replacements and extensions, bank widening, ballasting and ditching, was begun in connection with the standardization of the line between Summerside and Tignish on the Island Division.

At Moncton the additions to and rearrangements of the yard were continued and the cutoff between St. John and Harcourt Subdivision built last year was put in operation during the month of December as Main Line of Harcourt Subdivision between Moncton and Franklin Junction.

By these changes Harcourt Subdivision has been reduced by 3.92 miles Main Line and 3.03 miles second Main Line, while 3.45 miles of Main Line has been added, thus making a net reduction of 3.50 Miles main line in this Subdivision. On the St. John Subdivision there was an addition of 1.31 miles second main line and a reduction of 0.03 miles main line, making a net addition of 1.28 Miles of Main line in this Subdivision.

INTERCOLONIAL AND PRINCE EDWARD ISLAND RAILWAYS  
EMPLOYEES' PROVIDENT FUND

STATEMENT of Receipts and Expenditures during the year ended December 31, 1922

Balance to credit of the fund on December 31, 1921.....	\$ 603,462 18
The contribution made by employees during the year, being one and one-half per cent of their monthly salary and wages, were.....	\$ 280,360 00
The contribution made by the railways were.....	100,000 00
Amount received to increase retiring allowances of all retired employees receiving less than \$30 per month, in order that the minimum allowance now paid under the Act, viz. \$20, might be increased to \$30 per month, in accordance with vote No. 475, whereby an amount was placed in the estimates to supplement retiring allowances payable under the provisions of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund, including from January 1 to December 31, 1922.....	48,699 09
	<hr/>
	429,059 09
Amount received for refunds, etc.....	611 03
Interest accrued (at three per cent).....	15,213 30
	<hr/>
	\$1,048,345 60

The amount contributed by the employees is shown to exceed by \$180,360 the amount contributed by the railways. By reference to section 4 of the Provident Fund Act it will be noted that the maximum sum the railways are authorized to contribute to the Fund in any one year must not exceed \$100,000.

The expenditures were:—

For retiring allowance.....	\$ 433,647 75
For allowance made to retired employees receiving less than \$30 per month, to increase the minimum allowance in accordance with Vote No. 473, whereby an amount was placed in the estimates to supplement retiring allowances payable under the provisions of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund including from January 1 to December 31, 1922....	48,699 09
For contributions refunded in the cases of deceased employees	10,695 11
For contributions refunded, which were deducted in error....	2,068 04
For contributions refunded to discharged employees, etc....	5,630 90
Medical examinations for probationers entering the service, etc.....	1,104 00
Medical examinations for employees retiring from service....	33 70
For election expenses.....	1,406 15
For salaries and travelling expenses, secretary's office and proportion of salary of Chief Medical Officer.....	16,596 86
For stationery, printing, postage, etc.....	1,410 65
	<hr/>
	\$ 521,292 25
Balance to the credit of the fund on December 31, 1922.....	\$ 527,053 35
It will be noted by the above statement of receipts and expenditures that the amount of contributions received from the railways and from the employees during the year were.....	429,059 09
And the expenditures were.....	521,292 25
Showing that during the year the expenditures exceeded the receipts.....	92,233 16
The gross surplus, including interest, to the credit of the fund on December 31, 1922, was.....	527,053 35

W. A. KINGSLAND,  
Chairman.

C. B. TRITES,  
Secretary.

## GRAND TRUNK RAILWAY COMPANY OF CANADA

*To the Stockholders of the Grand Trunk Railway Company of Canada:—*

The Board of Directors submit the following report of the operations for the year ended December 31, 1922:—

## INCOME ACCOUNT

*Condensed Statement*

	Year 1922	Year 1921
Operating revenues.....	\$ 77,700,019 23	\$ 76,858,032 27
Operating expenses.....	70,317,813 45	71,179,292 80
Net operating revenue.....	7,382,205 78	5,678,739 47
Railway taxes.....	1,200,287 20	1,325,577 28
Equipment and joint facility rents, etc. (net).....	\$ 6,181,918 58	\$ 4,353,162 19
Net operating income.....	\$ 9,265,851 29	\$ 6,828,313 93
Non-operating income.....	5,347,824 66	5,691,456 86
Gross income.....	\$ 14,613,675 95	\$ 12,519,770 79
Deductions from gross income.....	23,025,409 98	26,584,213 15
Net income transferred to profit and loss.....	\$ 8,411,734 03	\$ 14,064,442 36

The operating revenues for the year were \$77,700,019, an increase as compared with the year 1921 of \$841,987, or 1.10 per cent.

Revenue from freight traffic was \$56,561,067, an increase of \$2,321,164 or 4.28 per cent.

Number of revenue tons carried 23,675,475, an increase of 1,987,726 or 9.16 per cent.

Revenue Tons carried one mile 4,561,145.848, an increase of 508,581,437 or 12.55 per cent.

Average haul per revenue ton was 192.65 miles, an increase of 3.10 per cent.

Freight revenue per train mile was \$5.59, a decrease of 3c. or .53 per cent.

Average revenue per ton was \$2.38902, a decrease of .11193 or 4.47 per cent.

Average revenue per ton mile was \$0.01240, a decrease of .00098 or 7.32 per cent.

Revenue from passenger traffic was \$14,342,003, a decrease as compared with the year 1921 of \$1,168,161 or 7.53 per cent.

Number of passengers carried was 10,998,246, a decrease of 611,516 or 5.27 per cent.

Average revenue per passenger was \$1.30403, a decrease of \$0.03193 or 2.39 per cent.

Average revenue per passenger mile was \$0.02864, a decrease of \$0.00181 or 5.94 per cent.

Average distance per passenger was 45.53 miles, an increase of 1.66 or 3.78 per cent.

Revenue from mails was \$1,212,433, an increase of \$78,696 or 6.94 per cent.

Revenue from express was \$2,883,700, a decrease of \$401,410 or 12.22 per cent.

Revenue from milk was \$228,541, a decrease of \$14,214 or 5.85 per cent.

Revenue from switching was \$679,860, an increase of \$118,002 or 21.00 per cent.

Revenue from dining and buffet was \$325,003, a decrease of \$3,042 or .93 per cent.

Revenue from demurrage was \$264,162, a decrease of \$51,640 or 16.35 per cent.

## SESSIONAL PAPER No. 32

## OPERATING EXPENSES

Operating expenses for the year 1922 were \$70,317,713, a decrease of \$861,479 as compared with the year 1921 or 1·21 per cent, as compared with an increase of 1·10 per cent in operating revenues.

Maintenance of way and structures decreased \$2,122,092 or 16·50 per cent.

Maintenance of equipment increased \$2,982,817 or 16·75 per cent.

Traffic expenses increased \$232,023 or 14·65 per cent.

Transportation expenses decreased \$1,554,149 or 4·37 per cent.

Average loaded cars per freight train mile were 22·49, an increase of 2·85 or 14·51 per cent.

Average empty cars per freight train mile were 10·38, a decrease of ·93 or 8·22 per cent.

Average total cars per freight train mile were 32·87, an increase of 1·92 or 6·20 per cent.

Average load per loaded freight car mile was 20·88 tons, a decrease of 1·38 tons or 6·20 per cent.

Average load per freight train mile was 450·83 tons, an increase of 31·28 tons or 7·46 per cent

Miscellaneous operations decreased \$48,186 or 10·42 per cent.

General expenses decreased \$343,433 or 11·83 per cent.

## THE GRAND TRUNK RAILWAY COMPANY OF CANADA

## PAY ROLLS

	Number employees	Total pay roll	Increase per cent over 1918
1918.....	25,342	\$30,152,476 36	.....

## INTEREST BEARING OBLIGATIONS

The total of interest bearing obligations outstanding at December 31, 1922, was \$380,323,236.25 as shown on page 31.

Principal retirements during the year were \$197,000.00 4½ per cent equipment trust notes “A”, \$336,000.00 4½ per cent equipment trust notes “B”, \$224,000.00 4½ per cent equipment trust notes “C”, and \$250,000.00 5 per cent equipment trust notes “D”. Principal issues during the year were \$7,739,865 loan from Dominion Government under Appropriation Act, 1921-22, and \$3,118,322 Loan from Dominion Government under Appropriation Act, 1922-23.

## CAPITAL EXPENDITURE

The capital expenditure account at December 31, 1922, amounted to \$394,737,012, an increase of \$3,167,549.46, details of which appear on page 33 (excluding credit of \$73,893,491.74 covering adjustment of prior year).

The Board desires to express its appreciation to the officers and employees of the company for their faithful and efficient services.

H. W. THORNTON,  
*Chairman and President.*

SESSIONAL PAPER No. 32

## GRAND TRUNK RAILWAY COMPANY OF CANADA

OPERATED MILEAGE DECEMBER 31, 1922

## CANADIAN LINES

	First Track	Second Track	Yard Track and Sidings
Portland Division.....	55.00		29.55
Montreal Division.....	480.76	173.28	117.19
Montreal Terminals.....	25.86	13.30	133.01
Belleville Division.....	650.38	201.71	197.95
Ottawa Division.....	466.07	1.58	121.32
Toronto Terminals.....	26.94	20.01	172.84
Barrie Division.....	444.02	1.30	153.09
Stratford Division.....	809.46	9.40	199.17
London Division.....	407.50	202.82	231.83
St. Thomas Division.....	244.61	88.34	143.24
International Bridge....	1.02	.58	5.83
Suspension Bridge.....	.25	.25	
Total.....	3,611.87	712.57	1,498.03

Of this mileage, 3,336.74 of first track and 689.99 of second track is owned, 250.47 of first and 8.40 of second track leased, and 22.29 of first and 4.32 of second track operated under trackage rights. In addition, there are 7.53 miles of third track and 7.43 of fourth track (Toronto Terminals) owned by the company, and 2.37 of first and .86 of second owned by subsidiary companies and operated without formal lease.

## WESTERN LINES

	First Track	Second Track	Yard Track and Sidings
Grand Trunk Western Railway.....	335.94	326.78	219.60
Chicago and Kalamazoo Terminal Railway.....	1.92		.53
Chicago, Kalamazoo and Saginaw Railway.....	9.51		12.04
Detroit, Grand Haven and Milwaukee Railway.....	188.32	15.72	144.99
Grand Rapids Terminal Railway.....	1.51		3.05
Toledo, Saginaw and Muskegon Railway.....	116.28		14.97
Pontiac, Oxford and Northern Railway.....	99.89		17.36
Detroit and Huron Railway.....	18.58		3.62
Chicago, Detroit and Canada G.T. Jct. R.R.....	59.55	11.08	92.28
Michigan Air Line.....	105.92		20.09
Cincinnati, Saginaw and Mackinaw Railway.....	53.10		45.40
Bay City Terminal Railway.....	1.17		2.53
Grand Trunk Milwaukee Car Ferry (85.9 miles).....			
Total.....	991.69	353.58	576.46

## NEW ENGLAND LINES

Atlantic and St. Lawrence Railroad, including line from Island Pond to International Boundary.....	165.28	.99	91.29
Lewiston and Auburn Railroad.....	5.43		1.28
Norway Branch Railroad.....	1.50		.45
Total.....	172.21	.99	93.02
Grand Trunk Railway System operated mileage.....	4,775.77	1,067.14	2,167.06

Of the Grand Trunk Western Lines 733.83 of first track, and 337.65 of second track are owned, 231.48 of first and 11.08 of second leased, and 26.38 of first and 4.85 of second track operated under trackage rights. The New England mileage is all leased. In some of the leased lines the Grand Trunk owns all or part of the capital stock.

THE CENTRAL VERMONT RAILWAY

The Central Vermont Railway is operated under separate management, but controlled by the Grand Trunk Railway Company of Canada.

The railway extends from New London, Conn., to Montreal, and the twenty-third annual report (year ended December 31, 1922) gives a total track mileage of 718·14. Of this 579·51 miles are in the United States and 138·53 in Canada. Mileage owned by the company includes 198·53 miles of main track, 5·79 miles of second track, 173·41 miles of branch line, and 126·80 miles of yard, siding and spur tracks. There are, in addition, leased lines including 121·02 miles of main line, 39·56 miles of branch lines and 52·93 miles of yard siding and spur tracks.

The following summarizes the results of operation for the year ended December 31, 1922:—

Gross receipts.....	\$ 7,626,626 19
Gross expenses.....	6,520,100 62
Balance.....	\$ 1,106,525 57
Taxes.....	223,375 59
Net debit from rentals.....	\$ 883,149 98
	201,595 42
	\$ 681,554 56
Hire of equipment—Dr. balance.....	506,519 18
	\$ 175,035 38
Interest on securities held by the company.....	3,000 00
	\$ 178,035 38
Fixed charges.....	914,849 57
Net result, deficit.....	\$ 736,814 19

The foregoing result, while not satisfactory to the directors, indicates improvement over the previous year. The deficit has been reduced more than fifty per cent from the preceding year whereas the amount of business increased but twenty-four per cent. To accomplish this result economies were practiced principally in the improvement of operating methods and in curtailing all other expenses.

## REPORT OF W. A. BOWDEN, CHIEF ENGINEER OF THE DEPARTMENT OF RAILWAYS AND CANALS

The through water route between Montreal, at the head of ocean navigation, and Fort William and Port Arthur, on the west shore of lake Superior, comprises 74 miles of canal, with forty-eight locks and 1,155 miles of river and lake waters, or a total of 1,229 miles. The minimum depth of water on this route is 14 feet. From Montreal to Duluth, on the southwest end of lake Superior, the total distance is 1,354 miles, and to Chicago 1,286 miles. Connection is made with the Canadian Pacific Railway from points west and south at Fort William and Port Arthur (6 miles apart). From Fort William connection with the main transcontinental line of the Canadian National Railways is made by the branch line originally constructed by the Grand Trunk Pacific Railway, but now operated by the Canadian National Railways.

On this through route the approaches to the canals and the channels of the intermediate river reaches are well defined, and are lighted with gas buoys under the control of the Department of Marine and Fisheries, admitting of safe navigation in the hands of competent pilots, both by day and night. The Lachine, Soulanges, Cornwall, Welland, and Sault Ste. Marie canals are lighted throughout by electricity and electrically operated. The Farran's Point canal is lighted by acetylene gas.

Of the minor systems, the Murray, Trent, Rideau, and Ottawa river canals may be considered geographically as branches of the through east-and-west route. In operation, however, these canals serve a distinct traffic of more local nature. Isolated from the systems just mentioned, the navigation of the Richelieu river from its junction with the St. Lawrence at Sorel to lake Champlain, is effected by means of the St. Ours lock and the Chambly canal; while in the extreme east the St. Peter's canal provides communication between the Bras d'Or lakes of Cape Breton island and the Atlantic ocean.

A full statement of the various canals and canalized waters now in operation, with their mileage, limiting dimensions, etc., is the subject of a separate departmental publication, *The Canals of Canada*. A summary of this data is, however, appended to this report.

In the detailed report which follows the various canal systems, etc., are taken up in the following order:—

The present St. Lawrence and Great Lakes route between Montreal and lake Superior.

The route from Montreal to Kingston viâ the Ottawa and Rideau rivers.

The navigation of the Richelieu river from its junction with the St. Lawrence to lake Champlain.

The route from lake Ontario to Georgian bay viâ the Trent river, etc.

The St. Peter's canal across the isthmus at the southerly end of Cape Breton island.

Miscellaneous works.

## ST. LAWRENCE AND GREAT LAKES ROUTE

## LACHINE CANAL

This canal was in operation for the entire season of navigation with only one interruption to traffic. The steamer *Saskatoon* went through both gates of south Lock 1 during the night of 21-22 October. Spare gates were installed with the least possible delay and traffic in the lock was resumed within 24 hours.

Of repairs and improvements made during the year the following may be noted:—Two new booms were constructed and placed on the south side of Basin No. 2. The old crib wharf, 185 feet in length, opposite the Sugar Refining Company was renewed in concrete. The wooden mooring posts, 40 in all, round the St. Gabriel basins were replaced by cast iron posts. The approaches to the bascule bridge were re-macadamized. Under contract with the Sicily Asphaltum and Paving Company a portion of St. Patrick street, 1,530 feet in length, was repaved in asphalt on a new concrete foundation.

## SOULANGES CANAL

The canal was operated without serious interruption to traffic during the entire season of navigation.

Following are the principal repairs and improvements effected:—Between Côteau Landing and Cascades Point, a distance of 14 miles, the roadway along the north side of the canal was resurfaced in macadam and penetration asphalt. This work, which was not quite completed in November last, will be resumed in the new fiscal year. The construction of a brick and steel frame shed on concrete foundation for the building and storage of lock gates, which was commenced the previous year, was completed. For a distance of 302 feet along the north slope of Weir 4, steel sheet piling was driven for reinforcement with a reinforced concrete apron 26 feet high connecting the steel apron built in 1918-19 with that constructed in 1921-22. Minor repairs such as the reflooring of swing bridge No. 6 at River Rouge, the rebuilding or repairing of 30 farm bridges, repairs to gates, pointing of masonry walls, etc., were also attended to.

## CORNWALL CANAL

This canal, which opened for traffic on 18th April, continued in operation for a period of eight months.

There were but two accidents neither of which caused serious interruption to traffic. On 29th September the steamer, *W. B. Morley* collided with the guard gates above Lock 20. The damage was repaired within twenty-four hours. On 23rd November the steamer *Canadian Warrior* caused some damage to several of the coping stones in the north lower entrance wall of Lock 20. Necessary repairs were completed before the close of the season.

Although coal traffic through this canal was considerably less than usual, the season proved an unusually busy one, an average of twenty-one vessels a day having been passed through the lower entrance to the canal.

In addition to a general overhauling and repairing of machinery during the period in which the canal was unwatered, repairs to banks, cleaning out, etc., the following more extensive repairs and improvements were attended to during the fiscal year:—At the entrance to the supply weir of Lock 21, one of the three timber cribs to which the booms are attached had become badly tipped over from constant impact from vessels. This crib was rebuilt during the winter months and will be placed in position and filled with stone as soon as the navigation season opens. One new scow, to be used as a boarding house for repair men, was constructed and another scow for the same purpose rebuilt. A combined store house, stable and waggon shed was erected and also a brick-faced

## SESSIONAL PAPER No. 32

workshop for the electrician, fully equipped with machinery. The wooden floor of the machine shop was relaid in concrete. At the guard gates west of Lock 20, the operating machinery was completely renewed. Along the south bank of the canal several hundred feet of the roadway leading to the canal wharf at Cornwall was macadamized.

## FARRAN'S POINT CANAL

This canal was in operation throughout the entire season without serious accident or delay to navigation. Among the repairs and improvements carried out during the past season, the following may be noted:—At the easterly boundary line a new wire fence was erected. The stone protection walls on both sides of the canal were repaired, a new pine floor was laid in the watch house and general repairs and cleaning out attended to at the locks.

## RAPIDE PLAT CANAL

This canal was also operated without any delay to navigation.

The following repairs and improvements, made during the past year may be noted:—The old "Gibson" flume, north of old Lock 23, was filled in. A wooden storehouse was erected at Morrisburg. Concrete and stone protection walls were repaired, and a dry rubble wall was built along the water's edge of the park at Morrisburg.

## GALOPS CANAL

No accidents nor delays to navigation were experienced.

A considerable number of repairs and improvements were attended to among which the following were the most important:—A new floor was laid on the bridge at Iroquois and also over the lock-filling chamber west of the watch house at Lock 25. On the north side of the highway at Iroquois, the government ditch was cleaned out and the side walls strengthened. The operating machinery of the Iroquois swing bridge was renewed. A considerable amount of fencing was renewed or newly erected both at Cardinal and Iroquois. Other lesser repairs such as the painting of buildings, construction of sidewalks, etc., were attended to.

## WELLAND CANAL

The volume of traffic on this canal was slightly in excess of that of the year before. There were 1,911 upbound and 1,888 downbound passages, making a total of 3,799 vessels traversing the entire route of the canal during the 1922 season. In addition to this through traffic, a large number of tugs, pleasure boats and other vessels made use of various portions of the canal. The total freight tonnage carried was 3,391,419, an increase of about 10 per cent over that of the previous year and in volume exceeded previously only by the records of 1913 and 1914. Wheat shipments amounted to 58,415,300 bushels, the heaviest ever recorded.

There were several accidents on the canal during the year occasioning delays to traffic. Early in the season the steamer *Marquette and Bessemer, No. 1* on the downbound passage, in passing through the swing bridge of the Grand Trunk Railway near Welland Junction, collided with a corner of the span, swinging it round in the wrong direction. This resulted in considerable damage being done both to the vessel and to the mechanism of the bridge. Through this accident traffic was delayed for 32 hours. About the middle of June the wooden steamer *India*, laden with grain, struck the lower gates of Lock 16 ploughing through them into the reach below. Some damage was caused to the canal banks from the consequent rush of water and the vessel remained sunken in the reach. Traffic was resumed however within 18 hours and the position of

the sunken vessel was not such as to seriously interfere with the navigation of the canal. In September both the upper and lower gates of Lock 15 were carried out by the tug *Joseph L. Russell* which struck the upper gates stern first. Some damage resulted from the rush of water from the reach above, but the delay to traffic was not serious.

*New Canal.*—Of the various repairs and improvements carried out on the new canal during the year, the following may be noted:—At Port Dalhousie extensive repairs were made to the west entrance pier. Similar repairs were also carried out at the west dock below Lock 1. The road approaches to the new swing bridge on Lock 3 were paved with a macadam wearing surface. At Lake street bridge the pile fenders on both sides of the canal were renewed. The cribwork, between the centre and rest piers of Bridge No. 4, between Locks 5 and 6, was capped with a solid concrete structure. The highway swing bridges at Niagara street, St. Catharines, Marlatt's and Welland were sand blasted and painted. Over 7,000 cubic yards of stone rip-rap were placed along various portions of the canal. The canal electrical transmission line between Port Robinson and Quaker Road was entirely rebuilt in a new location.

*Old Canal.*—Of repairs made to the old canal during the year the following only need be noted:—At Locks 16 and 19 reinforced concrete gate bars were installed replacing the former wooden mitring gates at the upper end of the locks. Below Lock 15 a cable suspension foot bridge, replacing the timber foot bridge, was constructed.

*Canal Feeder.*—The concrete roadway between Dunnville and Stromness, which had been commenced in 1921, was completed. At Stromness the wooden highway swing bridge over the Port Maitland branch of the feeder was replaced by a composite wrought iron and wood structure taken from Lock 3 of the present canal, and a new concrete substructure was constructed. At Sulphur creek near Dunnville a new steel highway bridge of three fixed spans was constructed on concrete piers and abutments to replace the former entirely wooden structure.

*Port Colborne Elevator.*—The Government grain elevator during the past fiscal year received 53,349,811 bushels of grain, an increase over the receipts of the previous year of about 10 per cent and over those of the year 1914 of about 35 per cent. The net earnings for the year were \$210,395.29.

#### WELLAND SHIP CANAL

For a detailed description of the various works which it is proposed to undertake in the carrying out of this work, it will be necessary to refer back to the report of the engineer in charge contained in the annual report of this Department for the fiscal year 1913-14, page 359. In the present report, as in that of last year, a brief résumé of the general scheme involved may, therefore, not be out of place.

The proposed ship canal leaves lake Ontario at the mouth of Ten-Mile creek, about three miles east of Port Dalhousie, follows an entirely different route from the present canal as far west as Allanburg, about half way across the peninsula, and from here proceeds along the course of the present canal to Port Colborne on lake Erie. The total distance traversed from lake to lake will be 25 miles. The difference of level between the two lakes, 325½ feet, will be overcome by seven lift locks, each having a lift of 46½ feet. The locks are to be 800 feet long and 80 feet wide in the clear and will provide a depth of 30 feet of water over the mitre sills. The width of the canal prism is to be 200 feet. A new breakwater, now under construction, will be built at Port Colborne, extending 2,000 feet farther into the lake than the present breakwater. Extensive harbour works are contemplated for the lake Ontario entrance at Port

## SESSIONAL PAPER No. 32

Weller. For purposes of construction, the canal is divided into nine sections or contracts numbered from the lake Ontario end. During the past fiscal year, work has been carried on on sections 1, 2, 3, 4 and 5.

■ On account of strikes and various labour troubles, construction work on this canal was considerably retarded for some time after the resumption of work at the close of the war years. Conditions in this respect have however improved materially during the past two years.

Following is a brief summary of the work performed and in progress on the various sections of the canal during the past fiscal year.

*Section No. 1.*—This section extends from Port Weller on lake Ontario in a southerly direction, a distance of nearly 3 miles inland, and comprises the entire harbour construction, prism excavation and one lock with weirs, etc., together with the construction of two bridges over the canal.

When work on the present contract was commenced, about 30 per cent of the entire work involved still remained to be completed. About 20 per cent of this work has yet to be done. Dredging operations were carried out in Port Weller harbour and satisfactory progress made, upwards of 300,000 cu. yds. having been taken out the greater part of which was deposited on the east side of the east harbour embankment. In addition to the foregoing, about 150,000 yards of land excavated material from Sections 1 and 2 was also placed on this embankment and a considerable portion of this is now ready for riprap. On the west embankment about 90,000 cubic yards of shale rock from Section 3 have been placed. At Lock 1, the extension of the lower west entrance wall was completed in November of last year. The diversion of the construction railway crossover was completed in September and traffic diverted to the new route. At Lock 1 the chamber floor has been completed, as also the pump pit monolith to coping level, the lower service gate, recess floor and mitre sill platform, the floor and the north end of the lock and the walls of the upper forebay, in all about 25,000 cubic yards of concrete. The cutting out of the recess for the lower west service gates, began in December last was completed last month. About 98 per cent of the concrete work on Lock 1 is now finished. The diversion of Ten-Mile creek was completed in April of last year and the water turned into the new channel. Excavation was then commenced for the waste weir and completed and about 71 per cent of the concrete work has already been placed. At regulating weir No. 1, 91 per cent of the structure has been completed. Work in the vicinity of Bridge No. 1 was carried forward as far as is possible until the N. S. & T. Railway has been diverted, an undertaking which it is expected will be effected by the end of April. Considerable preliminary grading of the railway embankments has already been carried out. Above Lock 1 a large amount of excavation was done at the pondage area and considerable concrete placed on the east bank of the pond.

To summarize the progress of the various classes of work performed on this section it may be stated that up to date there has been completed 94 per cent of the rock excavation, 86 per cent of the earth excavation, 67 per cent of the work on watertight embankments, and of concrete of all classes 82 per cent.

*Section. No. 2.*—The extent of this section is approximately  $4\frac{1}{2}$  miles. The work involved comprises the taking out of canal prism and construction of embankments, the building of Locks 2 and 3 with entrance walls, etc. and the substructures of several highway bridges.

The following work was performed on this section during the fiscal year:—At the lower west entrance wall of Lock 2 excavation for monoliths 12 to 16 was completed and concrete placed. This wall is now 89 per cent completed. At Lock 2 concrete operations were carried on continuously from April till the middle of December during which period about 53,000 cubic yards were placed. Work on this lock is now  $97\frac{1}{2}$  per cent completed. The greater part

of the lock floor still remains to be placed. The upper east and west entrance walls have now been completed. Back filling to the extent of about 230,000 cubic yards has been deposited at Lock 2 and at the entrance walls, or about 48 per cent of the total required. At waste weir No. 2 considerable excavation work was performed and piles driven for the wall connecting this weir with the lock. The cut-off wall under the weir has also been constructed. In all about 37 per cent of the concrete work has been placed. Regulating weir No. 2, with the exception of the deck slabs, is now completed. Between Bridge No. 4 and the Welland canal, excavation work on the canal prism was carried on continuously, about 357,000 cubic yards having been taken out. At the site of the lower west entrance wall to Lock 3 pile driving operations were carried on and are still in progress. The driving of sheet piling for the rear portion of the west wall of Lock 3 was commenced in December last and excavation has been started. Excavation of the forebay of this lock has been completed. South of the present canal about 24,000 cubic yards of material was taken out along the east side the canal prism.

Summarizing, the progress on various classes of work on this section stands as follows:—Rock excavation 57 per cent, earth excavation 76 per cent, watertight embankments 75 per cent and all classes of concrete 49 per cent.

*Section No. 3.*—This section extends southerly from Section 2 for a distance of about 2 miles. The work involved comprises the excavation of canal prism and lock sites, the construction of three twin locks in flight and one single lock together with masonry approach walls, a core wall for a dam, control weirs and other minor structures and the building of a large earth dam at the head of the flight locks.

During the past fiscal year work on this section has progressed as follows: Between August and November a small amount of excavation was done on the canal prism. Excavation at the site of twin Locks 4 was also proceeded with, some 74,000 cubic yards having been taken out. For twin Locks 5 excavation operations have also been in progress and about 62,000 cubic yards removed. At twin Locks 6 the outer walls of the east and west chambers were completed to one-third of their total height for a distance of 665 feet; the centre wall between the east and west chambers was completed to coping level for a length of 240 feet and to half its height for a further distance of 491 feet. About one-third of the concrete work on this structure has now been completed. Some excavation work was done for the dam and weir for Locks 6. The excavation work for Lock 7 has been completed and a small amount of concrete placed. On the canal prism south of Bridge No. 9, excavation was carried on from October till the middle of December and about 54,000 cubic yards of material were removed.

To summarize the work performed on this section to the present time it may be stated that 70 per cent of the total rock excavation has been completed, 64 per cent of the earth excavation, 71 per cent of the work on watertight embankments and of concrete work of all classes 19 per cent.

*Section No. 4.*—The extent of this section is about 2 miles southerly from the end of Section No. 3. The work involved comprises the excavation of canal prism, the construction of a new waterworks reservoir for the town of Thorold, the relocation of a branch of the Grand Trunk Railway, and various other lesser undertakings.

The progress of the work during the past year has been as follows:—Work on the Thorold reservoir was completed. The new reservoir which has a capacity of 4,940,000 gallons was put in service 13th August, 1922. The four piers for the new bridge on the relocated line of the Grand Trunk Railway were completed and the steel for both fixed and movable spans has been erected. Grading,

## SESSIONAL PAPER No. 32

ballasting and tracklaying have been completed over the entire length of the relocated line and surfacing and lining only remain to be done. On the canal prism a total of 850,000 cubic yards of excavation was taken out during the year.

A summary of the work performed to date on this section shows that 30 per cent of the earth excavation has been completed and 2 per cent of the concrete work.

*Section No. 5.*—This section is about  $3\frac{1}{4}$  miles in length. The work involved comprises rock and earth excavation and dredging, the construction of the substructure of bridges at Allanburg and Port Robinson and small quantities of concrete and stone protection along the canal banks.

Dredging operations were carried on along the canal prism during the entire season. 24,500 cubic yards of rock were excavated and 306,000 cubic yards of earth. Work on the east and west abutments of Bridge No. 12 has been in progress and is now practically completed. At Bridge No. 13 some progress has been made on the west abutment, but a portion of the north wing wall is as yet incomplete. Work on the east abutment has been started, the steel sheet piling having already been driven.

To summarize, about 78 per cent of the total estimated rock excavation has been taken out and 95 per cent of the earth excavation.

*Sections 6 to 9.*—These sections are comprised in that portion of the canal which lies between Port Robinson and Port Colborne, a distance of about  $10\frac{1}{4}$  miles. No construction work has as yet been commenced on this part of the route. Considerable survey work has, however, been done and plans and cross-sections prepared. Some test holes have also been sunk, soundings taken outside the breakwaters in lake Erie and boundary monuments set over the entire route.

*Construction Railway.*—All tracks and structures were maintained in efficient condition throughout the year. The swing bridge over the canal was repainted and the crossover trestle on Section No. 1 of the canal, which had become unsafe, was abandoned for the new diversion. The traffic of the past year, which was about double that of the year before, was handled throughout without serious accident or delay.

*Laboratory.*—Upwards of 300,000 barrels of cement were received during the year for work on various sections of the canal. Samples of this cement were taken at the mill at Port Colborne and the necessary tests were made in the laboratory. The samples tested numbered 1,850. Tests of sand, crushed stone and concrete were also made as well as physical tests of the various paints for structural work which have been submitted by manufacturers.

## SAULT STE. MARIE CANAL

This canal was open for traffic from the middle of April to the last week of December. The total registered tonnage of vessels which passed through the lock showed an increase of 25 per cent over that of the previous year. The total freight tonnage, however, was less than that of the year before by 15 per cent. This decrease must again be explained by the fact that on account of their greater depth a large number of Canadian vessels find it advisable to make use of the American canals. For the Canadian and American canals taken together the freight tonnage of Canadian vessels which passed the locks was practically the same as for the previous year.

No serious accidents or delays to traffic have occurred during the year. In the month of July two vessels went aground in the lower entrance near the south pier but were released without serious delay. It was found on subsequent examination that a sand and gravel shoal had formed at this point. This obstruction has since been removed by dredging.

The wooden portion on the top of the upper south pier was removed and concrete walls 300 feet in length were constructed along each side with connecting cross walls. The intervening spaces have been filled with stone and a portion of the deck completed. It is intended that this work shall be continued during the coming season. A new steel pontoon gate lifter, constructed by the Canadian Vickers Co., was delivered at the canal in November last. Extensive soundings were taken through the ice over the whole of the lower entrance during the winter and a number of shoals located. Various minor repairs have been attended to as usual.

## OTTAWA AND RIDEAU RIVERS

### STE. ANNE LOCK

This lock was in operation from the beginning of May till the end of November.

With a view to installing electric power in place of the present hand operation of the lock, the necessary machinery, including five 3 horse-power motors for gates and five 1 horse-power motors for sluices, have been purchased and will be installed during the coming season. The usual small repairs and improvements received customary attention.

### CARILLON AND GRENVILLE CANALS

These two canals opened for traffic on 1st May and were operated without interruption until the end of November.

The more important repairs and improvements carried out during the year include the following:—At the Carillon dam 275 feet of the downstream apron was rebuilt and stone ballasted. At Lock 2 a new lockhouse was constructed. The tow path was widened and strengthened between Locks 5 and 7. The superstructure of five mooring guide piers at the upper entrance of the Carillon canal was renewed. The government road at Carillon was regavelled and various other lesser repairs attended to.

### RIDEAU CANAL

During the past fiscal year a slight decrease in traffic, as compared with the year previous, was observed from the number of lockages reported. Very good water conditions prevailed during the entire navigation season.

A considerable number of repairs and improvements were carried out along the route of the canal among the more important of which may be mentioned the following:—At the Ottawa lock station the mitre sill of Lock 6 was replaced in concrete with steel face and one of the chamber walls at Lock 7 rebuilt with concrete blocks. A new concrete store house was built on wharf lot No. 4 at the canal basin as a dépôt for stores used upon the canal. A considerable portion of the basin wharfing was relaid in square timber and other lesser repairs attended to. At Hartwell's Lock station the upper mitre sill of the upper lock was rebuilt in concrete with steel face, the lay-by piers partially rebuilt and the bridge floor renewed. At Hogsback lock station the roadway along the canal bank was graded and tarviated for a distance of over half a mile, a new plank floor laid on the swing bridge and a number of small repairs attended to. At Black Rapids lock the lock gates were renewed and the lock house wired for electric lighting. At Long Island lock station the lay-by pier at the upper lock was entirely rebuilt, a new stable and shed erected at the lockmaster's house and the roadway at the junction of the waste weir with the embankment was repaired. At Kar's bridge a new floor was laid on the swing span. At Burritt's Rapids the old store house was replaced by one on concrete foundation. New lock gates

## SESSIONAL PAPER No. 32

were installed at Clowe's lock. At Merrickville a lay-by pier was constructed at the foot of the lower lock and the lock gates of the upper lock renewed. At Kilmarnock lock the long waste weir was rebuilt and both upper and lower lock gates renewed. At Smith's Falls the old swing bridge at the upper lock was taken out and replaced by a new span the substructure also being renewed in concrete. At Poonamalie new concrete piers were constructed at the stop-log dam and gates renewed at the lower end of the lock. A new timber swing span was erected at Rideau Ferry. New gates were installed at Newboro lock and a new kitchen on concrete foundation was erected at the lockmaster's house. At Jones's Falls the timber swing bridge was renewed. At Brewer's Mills upper lock a new timber swing bridge was erected and new lock gates installed. At the lower lock the lay-by piers were rebuilt and stone filled above low water. At Kingston Mills both upper wing walls, gate piers and recesses of the upper lock were taken down and rebuilt and a considerable portion of the masonry wall on the west side of the basin removed and replaced in concrete. A new pair of gates was hung at the lower lock and the old stable at the lockmaster's house replaced by a new structure on concrete foundation.

The dredge *Rideau* (formerly *Tay*) with tug *Agnes* was employed during the summer of 1922 in cleaning out excavated material from the canal along the new retaining walls between the "deep cut" and Pretoria avenue bridge, in dredging at the gravel shoal below Long Island lock station and also in the cut above Hartwell's locks. The entire dredging plant, which wintered in the Ottawa canal basin, was generally overhauled and repaired and put in good condition for next season's work.

## RICHELIEU RIVER NAVIGATION

## ST. OURS LOCK

This lock was opened on 1st May and closed on 30th November. Navigation proceeded without interruption throughout the entire season.

The rip-rap which was placed last year at the easterly end of the dam was concreted, a new scow 20 feet by 72 feet was constructed and the usual maintenance of structures received the customary attention.

## CHAMBLY CANAL

The navigation of this canal, which opened on 1st May continued uninterrupted for a period of seven months.

Of repairs and improvements made during the year the following may be noted:—The abutments of Bridge No. 8 at Chambly Basin, on the Montreal-Sherbrooke highway, were renewed in concrete and a new steel superstructure erected with reinforced concrete roadway and sidewalk. Along the westerly side of the canal from St. Johns to Montée St. Luc, a distance of over two miles, the roadway was resurfaced with water-bound macadam. The floor and sill of old Lock 1 was renewed in concrete. The old steel bridge from Chambly Basin was installed at Bridge No. 2 on concrete abutments, the abutments of Bridge No. 1 renewed in concrete and various other lesser repairs attended to.

## LAKE ONTARIO TO GEORGIAN BAY

## MURRAY CANAL

This canal, which is an open waterway 80 feet in width, with 12 feet depth at low water, across the isthmus of the Prince Edward County peninsula, connecting the bay of Quinté with lake Ontario, is without locks.

Navigation opened April 19, and closed December 9. The canal was in operation throughout the entire season.

Among the more important repairs and improvements carried out the following may be mentioned:—The four dwelling houses at the railway and Smithfield Road bridges were painted; the Smithfield Road bridge floor was replanked for about half its length; along the north bank of the canal slightly over half a mile of stone protection was relaid; bad spots on the highway were gravelled and waling timbers along masonry walls and faces of piers were renewed where necessary.

## TRENT CANAL

The route of the Trent canal, as now in operation or under construction, lies between Trenton, on the bay of Quinté, where direct connection is made with lake Ontario, and Honey Harbour, on Georgian bay, from which the waters of the Great Lakes are at once accessible. The canal is made up of a series of lakes and rivers connected by relatively short lengths of artificial cuttings. Connection between the water levels of the various reaches is effected by locks. The route may be briefly described as follows: Between Trenton and Rice lake the canal follows the line of the Trent river. Passing through Rice lake it enters the Otonabee river, the route of which is followed to its source in Katchiwano lake. From this lake the line of the canal passes in succession through Clear lake, Stoney lake, Lovesick lake, Buckhorn lake, Pigeon lake, Sturgeon lake and Cameron lake to the west side of Balsam lake. From here a connection is made by an artificial cutting with a small lake about two miles westward, and from the latter lake another cutting makes connection with Cranberry lake. From the south end of Cranberry lake connection is made with lake Simcoe by another artificial cutting. Passing through lake Simcoe the route of the canal continues to the Severn river, the line of which is followed to the Georgian bay outlets at Honey Harbour and Port Severn. From Trenton the canal rises to a summit at Balsam lake, the level of which is about 597 feet above that of lake Ontario. From Balsam lake to Georgian bay there is a fall of 262 feet. Between Trenton and Washago the canal has been practically completed and open to traffic since June, 1918, or for a distance of 203.6 miles. On the westerly portion of the route of the canal, or between lake Couchiching and Georgian bay, various works are under construction, a description of which will be found under a subheading farther on in this report. When completed, the total length of the canal from lake to lake will be about 236 miles.

*Canal in Operation*

As already stated in previous reports, that portion of the Trent canal which lies between Trenton and Rice lake was formally opened for traffic on June 3, 1918. The extent of the canal now in operation may therefore be stated as 203.6 miles, or between Trenton and Washago at the head of lake Couchiching. In addition to this is maintained the Lindsay branch, 30 miles in length, and various other channels aggregating in all about 60 miles. The total extent of canal and canalized waterways maintained in operation is therefore slightly over 300 miles.

Of the various repairs and improvements effected during the year the following are among the more important:—The dredge *Fenelon* resumed operations at Dangerfield Bar on the Otonabee river last May and completed the work which

## SESSIONAL PAPER No. 32

for several seasons has been in progress at this point. Dredging on the Otonabee was also carried on at Crawford's Grove, Yankee Bonnetts and at Braundport. The dredge *Auburn* was in operation at Stewart's and at Pine Plains. During the entire season these two dredges removed between them 36,423 cubic yards of material. Substantial lockmasters' houses were erected at Locks 2 and 10 and a brick residence was purchased for a similar purpose at Lock 7. The work of sandblasting and painting the Peterboro lift lock was completed last June. At Lock 19 a new crib pier was erected. At the junction of the Canal with the Talbot river, where extensive shoals had developed, dredging operations under contract with F. A. Robertson & Co., were commenced late in November last but had to be discontinued a week later on account of weather conditions. Work on the Mississaugua dam was completed and all equipment removed from the site. Dam No. 5 at Squaw river, and High Falls dam, both of which had been carried away by the freshet of 1922, were rebuilt. A new concrete dam was erected at Eagle lake replacing the former timber dam. A number of new lock gates were constructed and various other lesser repairs and improvements received the usual attention.

*Canal under Construction*

That portion of the Trent canal which is now under construction lies as already noted between Washago, at the head of lake Couchiching, and Honey Harbour and Port Severn on Georgian bay, and is known as the "Severn Division." This Division is for convenience divided into four sections, the Port Severn section, from Port Severn on Matchedash bay to Gloucester Pool; Section No. 1 from Honey Harbour to Big Chute and the Severn river; and Section No. 2 extending from McDonald's Chute to the head of lake Couchiching. On this division of the canal the following work was carried out during the past fiscal year:—All work at Hamlet Bridge was completed; the fixed steel span from the old bridge was moved to the new site in June, 1922, and placed on the new substructure, and by August the swing span, a contract for which had been let to the Standard Steel Construction Company, was ready for operation. A bridge man is now stationed at this point thus leaving the canal open for operation by any craft of the proper draught between Trenton and Sparrow lake. On the west side of the river just below Hamlet bridge a stone-filled timber wharf has been constructed. Dredging of the channel has been carried on at Sparrow lake chute and Portage bay cut resulting in greatly improved navigation facilities. Some work has also been performed on the enlargement of the marine railways at Swift Rapids, and Big Chute, to allow of the handling of 15 ton boats of 13 feet 6 inches beam, the original structures having been built to accommodate only 5 ton boats of 9 feet beam.

On the portion of the Trent canal which has been in regular operation, or between Trenton and Washago, certain works have also been performed by the construction forces. On the Ontario-Rice lake division, work under contract with the William Hamilton Company, was carried out involving the supply and erection of three submerged valves and operating machinery at the sluices of Dam No. 10. The housing in of the machinery was also carried out by the regular canal forces. A large amount of useful work was performed on this division by the engineering staff stationed at Campbellford including the inspection of work in progress, the placing gauges, various surveys, the collection of statistical data, etc. On the Peterborough-Lakefield division the only work in progress was that in connection with the dam at Nassau. This work, which had been partly carried out during the previous year, has now been brought nearly to completion. On the Lakefield-Balsam lake division the construction of a new dam at Young's Point has been under consideration. Plans for this undertaking have been prepared but no work has as yet been

carried out. At Bobcaygeon the lower entrance piers of the lock were completed and the greater part of the work of the Randolph Macdonald contract finished up. On the Holland river division a new floor was laid at Green Lane highway bridge.

During the past winter survey work was continued at Pigeon lake and at the easterly end of Buckhorn lake. Work of a similar nature was also carried on at Stoney lake.

#### ST. PETER'S CANAL

This canal, which was constructed between the years 1912 and 1917 connects the Bras d'Or lakes with St. Peter's bay on the southeast coast of Cape Breton island. It consists of a tidal lock 300 feet in length and 48 feet in width and provides for a minimum depth of water on the lock sills of 18 feet.

During the past season this canal was in operation from 24th April till 6th January of the present year. The total number of vessels making use of the canal during this period was 1,543, the volume of traffic being slightly less than that of the year before.

At the Atlantic end of the canal extensive repairs were made to the face of the concrete entrance walls. Portions of the floor of the lock were also repaired. Along the east side of the canal a part of the old cribwork which had become decayed was taken down and rebuilt. At the east end of the Atlantic wharf a short portion was taken down and rebuilt in masonry; the rebuilding of the remainder of this wharf above the highwater mark is in contemplation during the coming season. A number of other lesser repairs and improvement also received attention.

#### MISCELLANEOUS

##### HUNGRY BAY AND ST. BARBE DYKES

For a distance of about  $2\frac{1}{2}$  miles along the Hungry bay dyke the roadway was thoroughly resurfaced in water-bound macadam. The work of strengthening the protection walls on both dykes against erosions from lake St. Francis was continued. About 5,000 lineal feet of wall, in all, at various points along the dykes has now received attention.

##### ST. LAWRENCE SHIP CANAL

For many years the question of the ultimate enlargement of the St. Lawrence Canal system between lake Ontario and Montreal has been studied by the engineers of this department, and much data relating thereto has been obtained.

During recent years the work of completing definite plans for such an enterprise became necessary in order to enable the Department to deal intelligently with proposals, by private corporations, for the development of isolated water-powers which might seriously conflict with any reasonable development of the navigation and power potentialities of the river as a whole. Under this impetus, plans were evolved for a comprehensive development of the upper section of the river.

During the past season, two boring parties have continued the investigation of sub-surface conditions on the sites proposed for structures, and also at some other points where the rock elevation was considered desirable for a proper study of various schemes. To facilitate the drilling of the overburden and obtain some definite information about the underlying rock formation, a heavier well drill and a calyx core drill were added to the equipment with satisfactory results. One survey party has been employed during the summer season in running check levels to the various lock gauges and in making additional surveys to supplement those already compiled, chiefly on the south shore of lake St.

SESSIONAL PAPER No. 32

Francis, and in the towns on the Canadian side of the International section which are flooded in the proposed enlargement. In the winter season, this party with the assistance of the office staff, obtained extensive information on the ice jam which formed between the foot of Croil Island and Morrisburg, and also took some measurements of the discharge of the river.

An office staff has been employed throughout the year, when not assisting the outside staff, in the preparation of an economic analysis of the whole project and in computation of the various hydraulic data obtained in the field.

SESSIONAL PAPER No. 32

REPORT OF A. W. CAMPBELL, M.E.I.C., CHIEF COMMISSIONER  
OF HIGHWAYS

Major GRAHAM BELL, C.M.G.,  
Deputy Minister,  
Department of Railways and Canals,  
Ottawa.

SIR,—The year 1922 was exceptionally favourable for work of highway construction and improvement in all provinces, according to reports received from the different provincial departments of highways and from our own inspecting engineers. It is gratifying to note that steady progress was made in most cases from the date of the commencement of work until the various projects being constructed with Federal aid were generally improved or carried forward to completion.

In a number of provinces, not only was the programme of construction at first planned, completed, but a considerable amount of additional work was also undertaken and carried out.

Conditions making for this consistent progress were: exceptionally favourable weather, more efficient and available labour at lower rates, and an adequate supply of materials as required, also at lower rates.

Another factor making for greater progress in 1922 than hitherto in connection with Federal aid work, was the letting of many contracts during winter months. Contractors were thus enabled to familiarize themselves with the lay-out of their season's work, procure the necessary materials, equipment and labour early in the spring, and proceed without interruptions until their contracts were completed. These results were obtained as a consequence of the several Provincial Departments having had surveys of the work to be undertaken completed in good time so as to enable the office staff to prepare the plans and specifications necessary to the awarding of contracts.

In reporting for the fiscal year 1922-23 with respect to progress in the different provinces in connection with the Canada Highways Act, it is advisable to review the factors that have affected the rate of progress in completing provincial federal-aid systems approved by this department since the inception of the policy of federal co-operation with the provinces in constructing and improving a limited system of main and market roads, designed as far as possible to connect at provincial borders.

While the demands of local traffic on these roads and the various public and individual interests affected by a well considered plan of Dominion wide improvement thereof, should be the dominating factors as to the amount of construction to be undertaken in any given year, other factors of weight to Provincial Governments are the present and prospective cost of labour and materials involved in such work. However urgently construction and improvement of certain highway projects may be demanded by local interests, the extent of work undertaken is usually governed by varying opinions as to the relative economy of immediate or deferred construction, having regard both to the availability of funds and the cost of labour and materials. Since 1919, financial conditions and high costs of labour and materials have presented the problem as to whether these conditions were likely to continue or to become more favourable in the next few years.

Undoubtedly the amount of construction carried out in the majority of provinces of Canada during 1920 and 1921 was due more to the urgency of demand than to any idea that the prevailing rates of labour and materials were indicative of a new standard of cost levels. The enormous growth of automotive traffic in Canada has led to the general conclusion that millions of dollars must be forthcoming and expended as soon as possible for the improvement of main and market roads of all provinces. But in many cases, the question has been as to how long the necessary expenditure can be deferred until a reasonable stability in the market has been reached. Still the conclusion prevailed rather widely in 1920 and 1921, that a new scale of values and rates for labour and materials would have to be accepted without regard to standards of values as known before the war; and in a few cases the disposition to accept such a new standard of values affected the amount of construction carried out at the peak of the market. It is only by a comparison of rates obtaining in 1913 and since 1919, that this conclusion may be tested, and a proper comparison made as to the necessary and reasonable cost of highway work and materials from year to year; and hence, the importance of a careful study of the tendency of the market by administrators of large funds to be devoted to highway construction and improvement.

From information secured from the Department of Labour and the Dominion Bureau of Statistics of the Department of Trade and Commerce, index numbers have been prepared showing variations in rates of labour and materials during the years referred to. Upon the basis of six of the most important materials used in the construction and improvement of modern roads, and the item of labour most necessary in such work, that is, a teamster with team, the variations in costs are as follows:—

AVERAGE OF MATERIALS AND LABOUR

	Rates of wages for teamsters with team	Cost of materials
1913.....	100	100
1919.....	139	181.55
1920.....	216.37	216.96
1921.....	173.1	206.05
1922.....	155.8	169.15

While it is difficult to generalize with respect to the average cost of labour and material entering into the construction of the highway projects of a given province, and as different provinces require more materials in their construction work than others, it may be assumed as a working basis that on the average eighty per cent of the cost of construction of a road is on account of labour; and the balance for materials. Weighing labour and materials upon this basis, the index numbers above given show that the actual and necessary cost of highway construction and improvement varied during the years referred to as follows:

	Index number of labour and materials	Variations from assumed cost of \$10,000
1913.....	100	\$10,000
1919.....	147.51	14,751
1920.....	216.48	21,648
1921.....	179.69	17,969
1922.....	158.47	15,847

From the above it would appear costs for 1922 were almost on a par to those obtaining in 1919. It is not unreasonable to assume that approximately a nineteen hundred and nineteen standard of costs will prevail for some years; and there would appear to be no good reason for delay in undertaking and carrying to completion as much as can be financed of the large mileages in practically all Provinces of main and market roads unequal to the requirements of present traffic and without regard to probable large increases in automobile traffic using them.

## SESSIONAL PAPER No. 32

It is now obvious that, on the whole, any backwardness in execution of the work and objects sought by Parliament in passing the Canada Highways Act in 1919, and any delays in undertaking provincial programmes of construction and improvement of a limited connected system of leading roads, or the completing of sections thereof placed under agreement by the Federal Government, have been among the incidental effects of the war.

On the other hand, notwithstanding the handicap mentioned, there have been commenced by practically all provinces—as will be seen, by accompanying list of projects by provinces now under agreement, and the approved expenditures to date thereon—splendid systems of arterial road connections between their leading cities and towns; and to this extent, co-operation of the Federal Government with the provinces, in bringing about a systematic improvement of through or long distance routes has been manifestly in the general public interest, and an earnest of better future transportation facilities by road in all parts of Canada.

However, the original programmes of the various provinces in respect to highway improvement are far from completion and many years must elapse before construction and improvement of the nation's trunk routes overtake present need in this regard. Meanwhile the country's indirect tax bill for rough inferior roads is a not inconsiderable annual premium borne by all its industries.

Reference was made last year to the desirability in the public interest of conservation of expenditure on highway construction in the several provinces and the need of research and experiment to demonstrate most suitable methods of construction under different designs, and varying conditions of traffic. As yet little experimental work of this character has been undertaken in Canada.

## RESEARCH WORK

Point is given to the importance of carefully planned and systematically conducted experiments in designs of pavements, by the valuable data obtained as a consequence of the outstanding experiment of the many highway transport research activities in the United States last year, especially the test conducted in the state of Illinois on the Bates road. As a preliminary to an extensive programme of construction contemplated, that state undertook elaborate experiments upon this road with a view to determining the value of certain pavements under heavy truck traffic. Of 10,800 feet in length and consisting of 73 sections and subsections, the road was commenced in 1920 and completed during 1921. In March, 1922, trucks were started on the road, under the constant observation of stationary and travelling-inspectors; and after a definite number of trips the loads were increased by a definite amount, until nearly all sections were destroyed.

According to the chief engineer of the Division of Highways of Illinois, the principal conclusions drawn from the tests during 1922, may be summarized as follows: First, the road carrying capacity of any design of rigid pavement is in direct proportion to the ability of its weakest part to resist bending stress; and, secondly, rigid pavements having a uniform thickness or with edges thinner than at centre are greatly unbalanced in strength, and will fail at the edges long before the loads are reached that will cause destruction of other portions of the slab. Hence, it was found, in order to prevent progressive breaks from the edges, that designs for new pavements should provide either edges thicker than at centre, integral curves or a general widening of the rigid pavement, so as to distribute the traffic. The new design of cement concrete pavement prepared as a result of this conclusion calls for pavements with edges 9 inches in thickness, tapering to 6 inches at 2 feet from the edge and strengthened by a continuous  $\frac{3}{4}$  inch round smooth bar.

Other important data to builders of rigid and semi-rigid pavements relative to desirable ingredients, proper thickness of base and surface, etc., have also been obtained, proving the value of tests of that character.

## STANDARDIZATION OF SIGNALS

Measures were taken during the year to reduce generally prevalent hazards, and to afford convenience to highway traffic by securing that uniformity of danger and direction signals on the highways, not alone of the municipalities of a province, but of all provinces of the Dominion so desirable for fast moving modern traffic.

In November, 1922, the Canadian Engineering Standards Association undertook the formation of a Sectional Committee on Traffic Signals for Highways, and the following were invited to nominate representatives thereon: The Highway Departments of the nine Provincial Governments; the Board of Railway Commissioners; the Canadian Automobile Association; the Canadian Automobile Underwriters Association; the Canadian Good Roads Association; and the Canadian Electric Railway Association.

This committee will consider not only existing diversities of highway signals in Canada, but also the desirability of agreement between Canada's regulations and those to be adopted in the United States.

As shown by specifications attached to applications for federal aid, from different provinces, variations in practice and terminology respecting different features of the same type of road have pointed to the desirability of a reasonable measure of uniformity and standardization. Accordingly, steps were taken during the year to enlist the co-operation of the different Provincial Departments of Highways in arriving at mutually acceptable standard specifications for the usual types of street pavement, highways and common roads, materials required, suitable tests and terminology relating thereto.

Organization of suitable committees was commenced under the auspices of the Canadian Engineering Standards Association, which has already published and made available to highway engineers, valuable standard specifications covering Portland cement, reinforcing material for concrete, bridges, etc. Complete specifications are proposed covering the following: Road and bridge foundations and sub-grade preparation, earth roads, gravel, sand and clay roads, broken stone roads, bituminous roads, concrete roads, block pavements, and road structures.

## EDUCATIONAL ACTIVITIES

There were procured during the year, twelve models of road culvert and bridge construction to be used as an educative exhibit, showing desirable features of design of modern roads. The types illustrated include sand-clay, gravel, waterbound macadam, bituminous surface treated macadam, bituminous macadam, penetration method, cement concrete brick, cement concrete pipe culvert, iron pipe culvert, cement concrete box culvert, cement concrete arch culvert, and a T beam cement concrete bridge. The size of the models is 30 inches by 18 inches, scale  $\frac{1}{2}$  inch to the foot, except the T-beam bridge which is 36 inches by 30 inches in dimension.

Educational literature as to the economic, social and national values of good roads was published during the year. A first edition of 1,500 copies of Bulletin No. 1 entitled "Canadian Highways and Roads" was soon exhausted and 1,000 additional copies as well as 500 in French were necessary. To promote interest in the activities in highway construction being conducted in the different provinces, and to give a national perspective to a national work 3,000 copies of our last annual report were also published in bulletin form.

Circular No. 3, entitled "Motor Vehicle Registrations, Licenses, Revenues Fees, etc., and Statistics of Entries into Canada for Touring Purposes during 1921," also met with an appreciative reception, and had an influence in truing up motor vehicle legislation in two or three provinces.

## SESSIONAL PAPER No. 32

Sufficient time has now elapsed to permit of a summary being made of some of the direct and indirect results from federal co-operation with the provinces in road building. Although federal participation in highway work is by virtue of the Canada Highways Act, 1919, limited to encouragement of the construction and improvement of highways by the different provinces, necessarily this work has been proceeded with under conditions and regulations which have had an important bearing upon the whole situation. Some of the direct and indirect results of this policy have been:—

1. Selection of roads by the different provinces to be known as primary, secondary and local roads;
2. Construction and improvement of a connected system of interprovincial and primary roads upon permanent locations;
3. Encouragement to the making of careful surveys of locations and grades, so as to secure better foundations, proper drainage, durable construction and less costly maintenance;
4. With a view to encouraging engineering control and to secure greater competition in tenders on Federal aid highway work, calling for carefully prepared specifications and detailed drawings, and the preparation of preliminary estimates of cost, so as to afford prospective contractors full knowledge of the work proposed;
5. A more or less general adoption of classification of expenditures in accounting.
6. Encouraging the making of designs of construction in accordance with the present and probable traffic, as shown by censuses; and,
7. Encouraging the establishment of adequate organizations for construction and maintenance work of all highways in the different provinces.

Accompanying this report are statements of amounts expended under the Act by fiscal years to date, the highways with respect to which payments have been made, and agreements entered into, the work done and proposed to be done by the several provinces on such highways, classification, and status of completion of projects under agreement.

Part II is the report of the Chief Engineer dealing with physical conditions of federal aid work in each province.

COMPARATIVE STATEMENT Highways approved for Construction and Improvement and approved Mileages yet to be constructed under the Canada Highways Act, 1919.

Provinces	Programme Mileage Approved by Department	Improved by Provinces prior to July 7, 1919	Total Mileage under Agreement March 31, 1923	Approved Mileage to be Constructed March 31, 1923

Per cent.....	41.79	40.15	2.70	8.51	1.64	2.01	3.2	100.0

The statement of types of construction proposed on federal aid projects above given relates only to proposed work during the last fiscal year. It is a notable coincidence, however, that of the 25,000 miles of federal aid roads constructed in the United States, according to data furnished by the Bureau of Public Roads, Washington, practically the same percentages of gravel and waterbound macadam types were constructed in the United States with Federal aid as in Canada, as will be seen below:—

	Per cent
Gravel.....	39.1
Graded and drained.....	20.6
Cement concrete.....	18.3
Sand clay.....	10.8
Bituminous macadam.....	4.0
Bituminous concrete.....	3.1
Waterbound macadam.....	2.7
Brick.....	1.4
Total.....	100.0

Note will be made of the relatively high percentage of cement concrete roads being constructed in the United States. This fact is undoubtedly due to the enormous development in the neighbourhood of many large cities in that country of heavy commercial truck traffic. This means that industrial conditions largely determine types of construction of modern highways.

One of the features of the types of construction placed under agreement in Canada for federal aid during the year, was the relatively high percentage of bituminous surface treated macadam roads. This type is between the ordinary waterbound macadam road and bituminous macadam road. A bituminous surface treated road may be defined as consisting in the application to the surface of the road of bituminous material, preferably under pressure, hot or cold, at the rate of from one-tenth to one-half gallon per square yard which is then covered with stone chips, fine gravel or sand, depending upon the amount and quality of the bituminous material used. Bituminous surface treatments are intended to serve one or both of the following purposes:—

1. To form a protective mat or blanket to the gravel or broken stone; and
2. To prevent dust from rising from the road. It would appear that this type of construction might well be adopted over a considerable mileages of roads in eastern Canada, where broken stone and gravel can usually be had locally, and where motor vehicular traffic is becoming so general. This traffic

## SESSIONAL PAPER No. 32

requires an approximation of the smooth hard surface types ranging from bituminous macadam up. When properly maintained, *the bituminous surface treated gravel or broken stone road* affords the requisite qualities for the preponderance of automotive traffic as it now obtains, on most rural roads.

## LIST OF PROJECTS PLACED UNDER AGREEMENT BETWEEN THE DOMINION GOVERNMENT AND THE PROVINCE OF BRITISH COLUMBIA

From April 1, 1922 to March 31, 1923

Percentage.. 100% 3% 2% 31% 13% 47% 7%

The above statement shows the distribution of the approved expenditures of the different provinces, operating in connection with the Canada Highways Act. While approximately 50 per cent of the total approved expenditures to March 31, 1923 are given under the item "surfacing", this total is much larger than might be expected, as in practically all provinces it has been found to be impracticable to indicate the amount expended on the different projects for metalling in foundation work. Foundation work is of a more permanent nature than wearing surfaces, and might properly be regarded in most cases as a permanent feature of any road.

The second largest total is for grading. Under this head come such operations as excavation work, ditching, scraping, cutting and filling, as well as grading to a definite cross-section on the different projects receiving Federal aid.

Another permanent feature of any road as now constructed is the provision made for drainage outlets. The total expended upon culverts indicates that drainage is being amply provided for in Federal aid projects.

Under the head "Miscellaneous and Unclassified" come for example, expenditures for tree planting. Where trees are considered by our engineers necessary to protect road surfaces from the effects of the weather, the cost is considered as a proper item in construction. In the case of Quebec it includes some general expenditures on projects that were not classified.

It will be observed from the above that the preponderance of expenditures of the different provinces on their Federal aid highway work as approved by this Department have been for permanent features, to serve future as well as present traffic.

SUMMARY of Dominion Aid Payments to Each Province by Fiscal Years

Period	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskat- chewan	Alberta	British Columbia	Total

PART II

ANNUAL REPORT OF CHIEF ENGINEER, CANADA HIGHWAYS COMMISSION, FOR FISCAL YEAR ENDED MARCH 31, 1923

PROVINCE OF BRITISH COLUMBIA

The amount of the federal grant is \$1,251,955.

The general programme map shows a system of highways of approximately 1,977 miles, divided into 27 projects, numbers 1 to 27 inclusive.

There has been 22 agreements executed for the construction or improvement of 368.7 miles at an estimated cost of \$3,264,558, 40 per cent of which will be \$1,305,743.

The policy of the province is to construct high class well paved roads in the vicinity of cities and towns where the traffic is heavy, both on the mainland and on the island of Vancouver.

In the interior and more remote sections new roads are being constructed, old ones are being widened, steep grades as far as possible are being reduced, sharp curves are being taken out, culverts and bridges are being constructed or reconstructed, in the interior of the province native timber is used for culverts.

The only hard surfacing done last season was on that section of the Inter-provincial Highway lying between Vancouver and Chilliwack.

Federal aid roads in this province are graded from 16 feet to 18 feet wide, as traffic requires, and as far as reasonable cost will permit grades do not exceed 8 per cent. Work is done by contract, when possible, but the improvement of remote sections, that require immediate attention, have to be done by day labour, as contractors will not tender when it costs much money to get in labour supplies and plant.

To date there has been completed:—

	Miles
Gravel.....	164.00
Macadam.....	96.00
Cement concrete.....	43.00
Bituminous concrete.....	37.00
Bituminous macadam.....	28.00
Total completed to date .....	368.00

Considerable difficulty has been experienced by the provincial field engineer in obtaining economical location for some of the interior road projects, that is to say, in obtaining a road at a reasonable cost without exceeding a grade of 8 per cent and curves of less than 200 feet radius, particularly in side hill work where the necessary crib protection and stone retaining walls soon run up the cost.

It is, however, to be noted that contractors' schedule rates are now much lower than they were in 1919 and 1920, with a corresponding decrease in the costs per mile for the work being done.

It is also to benoted that this province by the end of the season 1923 will have earned its total grant under the Canada Highways Act, and may have done a considerable amount of highway work in excess of the amount required to earn the total grant allotted to that province.

There has been paid to date under the Act the sum of \$1,116,383.87.

## SESSIONAL PAPER No. 32

## PROVINCE OF MANITOBA

## GENERAL

The amount of the federal grant is \$1,602,625, to be earned as 40 per cent of the cost of completed work done in accordance with approved specifications and signed agreements.

The provincial general map, showing roads from which road projects may be selected, shows approximately 4,000 miles of highway.

Ten road projects, numbers 1 to 3 inclusive; 5; 7 to 11 inclusive, and 15, a total length of 1,241.4 miles, have been approved.

These included five interprovincial highways.

The projects have been divided into 40 sections and 22 of those sections, with a total length of 780 miles, are under agreement.

The width of grades varies from 18 feet to 24 feet according to present or anticipated traffic.

## GRADING

The grading was done by ordinary methods, lips, fresnoes, wheelers and tractor outfits being used. The tractor outfits consist of 10 feet to 12 feet blade machines hauled by gasoline tractors. There were no elevating graders on work in this Province.

## CULVERTS

There have been 185 reinforced concrete, 399 concrete pipe, 979 corrugated iron pipe and 20 timber culverts (Douglas fir) installed.

## SURFACING

One hundred and ninety-four miles of highway have been gravelled to date. With the exception of the southeasterly section of the province, there is a good supply of gravel.

Where gravel was not available, the road, in some sections, is surfaced with sand or clay as the case may require.

## GUARD RAILS

About 600 feet of guard rail has been placed where high fills require this protection.

## EXPENDITURE

Expenditure, audited up to September 30, 1922, by the federal auditor, on sections under agreement, is \$1,314,910.66.

Certificates have been issued on work costing \$1,293,220.54.

The expenditure, up to December 31, 1922, not audited, amounts to \$1,348,368.91.

Therefore, the percentage earned is about 33 per cent and the amount of federal subsidy yet to be earned is \$1,062,917.44.

## PROGRESS

Work has been commenced on all sections under agreement, viz., 780 miles.

The work done, to December 31, 1922, on all sections under agreement is 314 miles of grading completed; 152 miles 75 per cent completed; 194 miles of first coat of gravel; 56 miles of second coat and 25 miles of third coat; 5.8 miles of clay surfacing and 15.5 miles of sand surfacing.

## CONTRACT AND DAY LABOUR

With the exception of light grading, which can be done more economically by municipal grading machinery, all the work is done by contract.

COSTS

The estimated cost of the 22 sections under agreement is \$3,601,597.15, or an average cost of \$2,770 per mile.

The average cost of the 344 miles completed and the 152 miles 75 per cent completed, exclusive of surfacing, is \$2,265 per mile.

The terms of the agreements have been fulfilled except as regards the time clause.

PROVINCE OF NEW BRUNSWICK

The general programme map for this province shows a system of main highways of 1,371 miles from which road projects for improvement may be selected.

It is, however, to be noted that in so far as this province is concerned quite a number of sections in this 1,371 miles had been improved prior to the passing of the Canada Highways Act, so that it will not be necessary to improve this total mileage.

The provincial subsidy under this Act is \$1,163,845. Up to June 30 last 19 projects had been selected and approved for 1,237 miles, estimated to cost \$2,950,600, and \$1,107,479.35 has been paid to the Province under the Act for work done.

Up to December 31 last work had been completed as follows:—

	Miles
Bituminous macadam.....	10.7
Gravel.....	298.4
Total completed.....	<u>309.1</u>

and a large mileage of gravel road under construction.

Unimproved roads in New Brunswick were narrow, the right of way grown up right up to the edge of the travelled way, wooden culverts in poor condition and the roads badly drained.

Under improvement, the right of way is cleared, the road is diverted where required to take it out of sloughs or other soft places, bad curves and grades are eliminated where possible at a reasonable cost, permanent culverts are put in and the new road graded to a width of 20 feet, and gravelled 16 feet or 18 feet wide as may be required.

This province is fortunate in having, with few exceptions, an abundance of good gravel adjacent to all road projects so that when the general road programme is completed the province will have an excellent system of high class gravel roads that should be, owing to the proximity of gravel pits, well maintained at a reasonable cost.

The work is done under the direction of the Minister of Highways, and all federal Aid work is done under the direct supervision of the Provincial Chief Engineer of Highways and his resident engineers.

The Provincial system connects with Nova Scotia at Amherst and with the Quebec system at Matapedia and Edmunston.

PROVINCE OF NOVA SCOTIA

The general programme map for the province of Nova Scotia as approved consists of 900 miles of highway from which projects for approval may be selected.

Up to date 425.60 miles have been approved and 48 agreements have been executed for an estimated expenditure of \$3,548,565.39, and the estimated Dominion aid for that amount is \$1,419,426.16.

The Dominion aid available under the Canada Highways Act is \$1,468,720.

There has been paid to date, under the Act, the sum of \$1,297,481.63.

## SESSIONAL PAPER No. 32

Work completed up to December 31 last is as follows:—

	Miles
Gravel surfacing.....	242.26
Waterbound macadam.....	37.73
Tarvia.....	6.50
Crushed rock.....	11.80
	<hr/>
	298.29
Under construction—	
Gravel.....	122.24
Waterbound macadam.....	5.00
	<hr/>
Total completed and under construction.....	426.53

The unimproved roads in this Province are generally narrow and poorly drained, old wooden culverts usually in bad condition, the right of way overgrown with bushes and trees up the edge of the travelled way.

Under improvement—the right of way is cleared, the road regraded and when necessary diverted to take out dangerous curves and bad grades, the travelled way widened to 18 or 22 feet as traffic may require, and permanent culverts of concrete or corrugated iron are put in.

The surfacing generally consists of gravel from 10 to 16 feet wide as may be required.

The control of public roads in the province is under the direction of the Minister of Highways and a Highway Board of three members, who have charge of the construction and maintenance of the roads, and all work done on federal aid roads is done under the supervision of district and resident engineers.

It is to be noted that the progress on federal aid work in this province has been very satisfactory, particularly during the past two seasons, and that by the end of this season the province will have earned the full amount of the grant under the Canada Highways Act.

A considerable amount of money has been expended in the province in the elimination of dangerous curves and road diversions in order to eliminate bad grades.

Should the 900 miles shown on the general programme map be completed this province will then have a complete and satisfactory system of main highways serving the settled sections of the province.

## PROVINCE OF ONTARIO

### GENERAL

The Provincial system of highways, as submitted to and approved by, the Honourable the Minister of Railways and Canals covers 1,839 miles of road. This comprises the system from which the province may select highways to be constructed, or improved, as projects under federal aid.

There has been placed under agreement a total length of 628.84 miles, covering thirty projects or portions of projects.

### PROGRESS

The following is a general summary of the work done to March 31, 1923, on highways under agreement for federal aid.—

	Miles under improvement	Miles completed
Gravel surface.....	54.62	178.63
Waterbound macadam surface.....	104.60	109.78
Bituminous macadam surface.....	5.60	24.09
Bituminous concrete surface.....		19.68
Cement concrete surface.....		36.93
	<hr/>	<hr/>
	164.82	369.11
	<hr/>	<hr/>

## RIGHT OF WAY

The standard width of right of way has been determined at 86 feet as being the minimum which will properly provide for a 30-foot roadbed, standard side ditches, telegraph, telephone and power lines, sidewalk and shade trees. The right of way is being widened to this standard wherever it is reasonably possible.

## CLEARING AND GRUBBING

Very little clearing and grubbing is necessary in Ontario, as most of the provincial highways at present follow existing roads which are largely through cleared country.

## GRADING

Grading varies from 1,000 to 20,000 cubic yards per mile, depending upon the character of the country, but the average for work done to date is between 4,000 and 6,000 cubic yards per mile. The standard width of roadbed is 30 feet with a ditch on each side 2 feet wide at the bottom and 2 feet deep. Where springs are encountered or the subgrade is wet, subdrainage is provided by the use of agricultural tile.

## BRIDGES

All new bridges have steel superstructures, reinforced concrete floors and mass or reinforced concrete substructures. They are designed for 20 tons. When over 20 feet in clear span, they do not receive federal aid.

## CULVERTS

All new cross culverts, that is those under the highway, are of the reinforced concrete flat top type with protecting end walls. In the early stages of the work, some concrete pipe, encased in concrete, was used but this type is not now being put in. Side entrance culverts are constructed of concrete or vitrified clay pipe, the end being protected by hand laid rip rap or rough rubble walls.

## ROAD SURFACE

*Gravel* for construction purposes is laid in courses 3 inches to 4 inches thick and each course is allowed to consolidate with traffic before the application of the next course. Rolling is not resorted to except in cases where the gravel is of such a character that it does not consolidate readily under traffic. A considerable amount of experimental work has been done for the surface treatment of gravel roads for the purpose of preserving the surface and keeping down dust. Calcium chloride has been found generally more satisfactory than oil for such purposes, and its use is being extended as rapidly as possible.

*Waterbound macadam*, when used as a finished surface, is from 7 to 8 inches in thickness and is laid in two courses, the lower course being 4 to 5 inches and the upper course 3 to 4 inches in thickness. When used as a base for a more permanent surface, waterbound macadam is generally laid in one course 5 inches to 6 inches in thickness. In swamps and at other points where the subgrade is soft, macadam surface is laid on a rubble base which varies in thickness from 8 to 12 inches. It has been found that waterbound macadam roads deteriorate rapidly if not protected by surface treatment. The practice in Ontario, is, now, to give all such roads surface treatment with road oil.

*Bituminous Macadam*.—This type of pavement is laid in depths of 3 and 4 inches and both asphaltic and tar binders are in use. Many of the Ontario limestones are not suitable for this type of road, consequently the mileage of bituminous macadam being constructed is not large in proportion to the total work done.

## SESSIONAL PAPER No. 32

*Bituminous concrete*.—Surface is laid in two courses, each  $1\frac{1}{2}$  inches in thickness. For the lower course, coarse aggregate open binder is the usual type adopted, the upper course being a stone filled sheet asphalt. The standard base for bituminous concrete is either cement concrete 5 inches thick or waterbound macadam 5 to 8 inches thick.

*Cement Concrete*.—The standard thickness for cement concrete pavement, 20 feet wide, is  $8\frac{1}{2}$  inches at the centre and 6 inches at the sides, the upper surface being finished to an arc of a circle with a camber of  $2\frac{1}{2}$  inches.

*Grades*.—There have been no grades steeper than seven per cent constructed on Federal Aid work, and in general five per cent is the limiting grade. The steep, narrow, dangerous hill is now almost a thing of the past on the Provincial System of highways.

*Curvature*.—Great progress has been made in the past year in easing sharp curves and right angle bends. The “banking” of curves is now standard and is being generally carried out with the result that many dangerous curves have been rendered safe.

## COSTS

The following table gives the average cost per mile for each type of highway constructed under federal aid:—

	Per mile
Cement concrete.....	\$40,600
Bituminous concrete.....	58,575
Waterbound macadam.....	26,794
Gravel.....	10,958
All types.....	27,334

## PAYMENTS

The total allotment, for the province of Ontario, from the federal appropriation under the Canada Highways Act, is \$5,877,275. The province has received under this appropriation \$3,374, 247.29 to date, leaving a balance due of \$2,503,027.71.

## PROVINCE OF PRINCE EDWARD ISLAND

The public roads and highways of the province of Prince Edward Island are under the control of the Commissioner of Public Works and under him is a provincial engineer, who, with his staff, has supervision over all construction and maintenance road work, including the improvement of roads with Federal Aid according to the provisions of the “Canada Highways Act.”

In the province of Prince Edward Island no gravel deposits have been found suitable for road surfacing and even gravel for concrete has to be obtained from the mainland. The underlying rock of red sandstone is too soft and friable for crushing, and rock of a harder nature required for construction purposes has also to be imported. Under these circumstances, the construction of roads with hard surface of gravel, macadam or concrete has not been attempted.

A standard improved earth road has been adopted for all highways being improved under the Canada Highways Act, within a road surface 18 feet wide. The underlying soil consists of a mixture of red clay and a fine reddish sand, the proportion of sand being greatest in the eastern part of the province. It has been found that, with the proper proportion of clay and sand, a very good road surface is obtained, and when well crowned, sheds the water very quickly and drying out presents a hard wearing surface for traffic. Where the road surface is all clay it tends to rut under traffic in wet weather and, where there is too large a proportion of sand, there is a wash to the foot of the grades, making there an

accumulation of fine loose sand difficult for traffic. It is the constant endeavour of the engineer in charge of road improvements to surface with the best proportion of sand and clay obtainable.

In the unimproved roads, culverts are generally of wood construction. These are being replaced by concrete culverts corrugated iron pipes and, in tidal estuaries, by creosoted pile trestles with concrete slab floor.

From the passing of the Canada Highways Act in 1919 until the end of the fiscal year, March 31, 1922, the province entered into agreements, under the provisions of the Canada Highways Act, for the improvement of 20 projects, aggregating 181.25 miles in length. Of this mileage 45.5 miles were completed in 1921, and the remainder, 135.75 miles, were completed during the present fiscal year. During the present fiscal year, ending March 31, 1923, further agreements were completed for the improvement of 156.75 miles. This consists of 16 projects (No. 24 to No. 39 inclusive). Several of these projects have been practically completed, but, as some work has to be done on all next spring, none of the projects undertaken in 1922 are shown as completed.

The total mileage under agreement is this 338 miles; the total completed 181.25 miles, and the mileage under construction 156.75 miles.

The average cost per mile in this province, for a completed 18 feet wide clay road, with new culverts, but not including the cost of crossing tidal estuaries, is \$2,358 per mile.

The general programme map shows a system of 850 miles of road and the federal grant is \$603,455.

#### PROVINCE OF QUEBEC

The general programme map for the province of Quebec shows a system of main roads, covering 2,949.13 miles from which road projects may be selected.

Up to June 30 last, 80 agreements had been completed for 631.6 miles, estimated to cost \$7,145,093.31, the subsidy on which would be \$2,858,037.37.

The provincial subsidy under the Act is \$4,748,420 of which \$1,741,781.90 has been paid to date.

There has been completed up to December last:—

	Miles
Cement concrete.....	22.429
Asphaltic concrete.....	52.510
Bituminous macadam.....	18.422
Waterbound macadam oiled.....	38.221
“ “ .....	10.700
Gravel.....	283.630
Stone shoulders.....	9.230
Miscellaneous works.....	1.520
	<hr/> 436.662 <hr/>

There was also 123.3 miles of various classes of pavement under construction, but not complete at the above date.

It would appear that under the system by which the local municipalities in the province of Quebec control the question of road expenditures and the class of pavement to be put down within their respective limits, sometimes results in delaying the work of completing a road, as differences of opinion have to be adjusted as between the Provincial and Municipal authorities as regards the location, class of pavement and cost of the road through a municipality.

Improved roads in Quebec are graded from 20 to 24 feet wide, and gravelled the full width of the grade. The gravel in this Province is usually put on 12 inches deep in the centre, running out to a feathered edge at the sides.

At the present time this province has a large number of short isolated sections of work under construction. This is caused, as above stated, by the necessity of having the compliance of the local municipal authorities to the improvement of the highway which they control.

## SESSIONAL PAPER No. 32

However, as the local authorities fall into line the unimproved sections will be completed, so that there will then be long stretches of the main highway, now under construction, continuously improved.

The improved roads are being well drained. All new culverts are of reinforced concrete, as pipe culverts of either concrete or corrugated iron are not favoured by the provincial engineers.

There has also been considerable money expended on the elimination of bad grades and dangerous curves.

In the old Quebec roads there are many right angle turns, some of which for motor traffic are in dangerous locations, some have been improved by diverting the road, others still remain, but I presume they will also be improved as time and money will be available.

The provincial engineers are to be commended on the care which has in all cases been taken to secure a solid foundation for the improved highways that are unavoidably located through bogs and other soft places. These are usually filled up with field stones to sub-grade, thereby securing a solid foundation for the pavement that will last for all time.

Highway work in this province is under the direction of the Minister of Highways, his deputy and chief engineer, the latter having a large staff of district and resident engineers.

The Provincial Government also assume the total cost of maintaining all highways that have been improved under federal aid.

## PROVINCE OF SASKATCHEWAN

## GENERAL

The amount of the federal grant is \$1,806,255. The general map, approved July, 1920, shows a system of highways of approximately 7,311 miles, which includes four interprovincial highways. Twenty-five projects, Nos. 1 to 23 inclusive, and 26 and 27, a total length of 5,338 miles, have been approved.

These projects have been divided into 191 sections, and sixty of these sections, with a total length of 1,518 miles, are under agreement. The present policy of this province is to construct well-drained earth roads, surfacing with gravel only on portions where the material in the grade is unsuitable, or where traffic warrants the expenditure. The width, in general, of the highways constructed, is 20 feet, but this has been reduced to 18 feet on eight sections.

## GRADING

The grading was done by ordinary methods, slips, fresnos, wheelers, blade and elevating graders being used. There were no tractor outfits on the work in this province. Six hundred and fifteen miles of grading have been completed and 160 miles is about 80 per cent complete.

There have been 18 miles surfaced with gravel and 39 miles of sand surfaced with clay.

## CULVERTS

There have been 21 reinforced concrete, 1,840 concrete pipe, 1,897 corrugated iron pipe and 230 timber culverts (Douglas fir) installed.

## EXPENDITURES

The subsidy payable on the work done to December 31, 1922, amounts to \$738,241.18. The amount of the federal grant is \$1,806,255, therefore, the percentage earned is about 41 per cent, and the amount yet to be earned is \$1,068,013.82.

## PROGRESS

Of the 60 sections under agreement, work has been commenced on 54 of them and 16 have been completed. The length of the sections under agreement is 1,518, miles.

The total work done to the end of December, 1922, on all sections under agreement is 615 miles of grading completed, 160 miles 80 per cent complete, 18 miles of gravel surfacing, 39 miles of clay surfacing. There have been 21 reinforced concrete, 1,840 concrete pipe, 1,897 corrugated iron pipe and 230 timber culverts installed.

## COSTS

The estimated cost of the 1,447 miles under agreement is \$2,976,902.21. The average cost per mile is \$2,050. The actual average cost of the 615 miles of grading completed and the 160 miles which is about 80 per cent complete, is \$2,300 per mile. The average cost of the 18 miles of one-coat gravel surfacing is \$1,800 per mile, making a total of \$4,100 per mile for a one-coat gravel surfaced road. The average cost of the 39 miles of clay surfacing is \$3,100 per mile, making the average cost of a clay surfaced road \$5,400 per mile.

## FULFILMENT OF AGREEMENTS

The terms of the agreements have been fulfilled with the exception of the time clause.

## MAINTENANCE

During 1922, the maintenance department was reorganized. This department now consists of superintendent of highways, district superintendents, local supervisors and patrolmen. The work, in general, was well maintained during 1922.

GORDON GRANT,  
*Chief Engineer.*
